

The Family That Turned a Screw Into a Public Company

Pankaj and Vipin Lidoo started by importing screws from Taiwan in 1999. Twenty six years, three generations and a conversion to a public limited company later, Landmark Crafts is exporting the same category back out into the world.

Most manufacturing success stories in India are told through what a company started making. The more interesting part of the Landmark Crafts story is what it stopped needing to import. When Pankaj and Vipin Lidoo entered the self drilling screw business in 1999, India's colour coated sheet roofing boom was creating fresh demand for a component the country did not know how to make at scale, so it imported nearly all of it from Taiwan. The brothers spent their first years as importers themselves, using that relationship to absorb manufacturing know how before setting up their own production lines.

What they built has since outgrown the private, family run structure it started as. Landmark Crafts now operates as a public limited company with three Lidoos, Pankaj, Vipin and their father Chaman Lal, on its board, running manufacturing units across Ghaziabad and Panchkula with roughly 221 employees and annual revenue in

the Rs 100 to 500 crore range for the year ending March 2025. The company holds a Dun & Bradstreet global listing, ISO 9001:2015 certification, and a CRISIL SME 1 rating, credentials built specifically to compete for the kind of institutional and export orders a purely domestic supplier would not win.

"We invested heavily in R&D to build screws that meet India's diverse climatic conditions," Pankaj Lidoo has said, describing engineering choices that now show up in the product line itself. The company's screws carry a Xylan coating tested to withstand 1,000 hours of salt spray exposure, paired with EPDM washers for leak resistance, and are engineered to drill through purlins up to 18 millimetres thick, specifications aimed squarely at the metro stations, pre engineered buildings and industrial rooftops where a fastener failure is not a minor defect but a structural one.

The portfolio has widened accordingly, from self drilling screws

into aluminium blind rivets, dry wall screws and butyl tape under the HP and Screwmaster brands, serving mechanical, automobile and construction clients across a widening international footprint alongside the domestic one. "Landmark is a thorough example of Made in India startups reinvesting earnings toward Atmanirbhar Bharat," Vipin Lidoo has said, framing the company's growth less as a business milestone than as a policy demonstration.

Twenty six years after two brothers decided a Taiwanese import category was worth building domestically, Landmark Crafts is attempting the harder sequel: proving that an Indian fastener manufacturer can hold its own in the export markets it once depended on. If the last two decades were about import substitution, the company's next chapter is a bet that Indian engineering, in a category as unglamorous as the screw, can travel the other way.
