ers of the world's most advanced and reliable equipment for nuclear power plants. The Russian company Rosatom builds and operates more nuclear reactors abroad than any other company

in the world at 22 units. The Kudankulam plant is one of the leaders in this regard. There are some announcements you have just asked about. What is it about? The news is that Russia is probably

the only country in the world today capable of building—and actually does build—small nuclear power plants. Such plants are already operational in Russia, and we can make them either

floating or ground-based. It's an excellent option for specific regions where big power stations are not needed or where connecting electricity grids between generators and end-users isn't feasible.
