

HOW ADANI DEFENCE IS POWERING INDIA'S ATMANIRBHAR FUTURE

With rising exports and major investments in future-ready capabilities, Adani Defence and Aerospace is emerging as a central force in Make-in-India mission—strengthening national security, building strategic autonomy and positioning the nation as a global defence powerhouse.

Adani Defence has won the SIDM Champion Award 2025 for its Kanpur Ammunition Complex, recognising excellence in design, manufacturing and testing of ammunition.

India's defence landscape is undergoing a decisive shift. For decades, the country imported more than 60 per cent of its military hardware, relying heavily on global suppliers and exposing itself to supply disruptions, geopolitical uncertainty and significant foreign exchange outflows. That picture began changing rapidly after Prime Minister Narendra Modi launched the Atmanirbhar Bharat Abhiyan on 12 May 2020, placing self-reliance at the heart of India's long-term strategic doctrine.

The results are visible in historic numbers. According to the Ministry of Defence, India's defence exports touched ₹23,622 crore in FY 2024–25, a 12.04 per cent rise over the previous year, with Make-in-India defence systems now supplied to nearly 80 countries. Few companies embody this transformation more sharply than Adani Defence. In less than a decade, the company has created one of India's most comprehensive private-sector defence portfolios—spanning unmanned aerial systems (UAS), counter-drone technologies, small arms, ammunition, missiles, loitering munitions, aircraft services and simulation training.

It has delivered multiple industry firsts: India's

first private-sector military unmanned aerial vehicle (UAV) manufacturer and exporter; the first integrated private-sector small-arms manufacturing ecosystem; and one of South Asia's largest ammunition and missile complexes. Each milestone reduces India's historic dependence on foreign suppliers and enhances national strategic autonomy.

Innovation, scale and capabilities

Adani Defence's rapid rise is rooted in a clear strategic choice: to develop indigenous technologies for India's unique security environment—ranging from Himalayan altitudes to maritime frontiers and hybrid-threat zones. Its facilities in Kanpur and Hyderabad have evolved into fully integrated research, design and production hubs for ammunition, missiles, unmanned systems, loitering munitions and counter-UAS technologies.

Among the company's standout platforms is the Arya 52 Mounted Gun System, a next-generation artillery solution engineered for mobility and rapid deployment.
