N

TPC ACHIEVED AN important green milestone in FY25 with the listing of its green energy business, NTPC Green Energy Ltd, a clear move to tap the next phase of growth in the power sector by balancing conventional and non-conventional sources, ensuring reliability, affordability, and sustainability.

The company, with an installed capacity of 80 gigawatts (GW), generates power from coal, gas, liquid fuel, nuclear, hydro, solar, wind and other renewable energy sources. Currently, 33.7 GW capacity is under construction, comprising 16.9 GW of coal, 2.2 GW of hydro, and 14.6 GW of renewable. NTPC has also entered the energy storage business to support India's plans for grid stability and renewable integration.

Consolidated installed and commercial capacity was 85 GW as of 9MFY26 compared to 76 GW in 9MFY25, an increase of 11.8% year-on-year. "Despite subdued power demand in the current year, the company remains con-

fident about sustained incremental growth going forward. Additionally, the company is well-positioned to leverage its strong balance sheet and focus on timely project commissioning, plant efficiency and balance sheet discipline," brokerage firm Geojit BNP Paribas said recently.

In FY25, NTPC, under Chairman and Managing Director Gurdeep Singh, made major progress in expanding the renewable energy footprint. NTPC Group's commercial capacity reached 7.9 GW in FY25. Of the 3.9 GW capacity added in FY25, 3.3 GW was renewable, underscoring commitment to a diversified and clean portfolio.

Singh, with NTPC since 2016, has been instrumental in the company's growth and securing its future. He was slated to retire in July 2025 but given a one-year extension. During his nearly decade-long stint with the country's largest power generation company, he has launched a series of initiatives and brought about cultural changes to maintain NTPC's position as a leading global energy company.

Singh has positioned NTPC at the forefront of energy transition and started initiatives like aggressive renewable addition, green hydrogen, acquisitions, biomass, waste-to-wealth and CCU (carbon capture and utilisation) to transform NTPC from merely a "coal-based power generating company" to a "sustainable integrated energy company". He has been felicitated in the BT-PWC India's Best CEOs list under the Urban Visionary-Power category.

During FY25, the group capex rose to ₹44,636 crore, a notable increase from ₹35,385 crore in FY24. On a stand-alone basis, capex recorded strong growth, reaching
