₹22,965 crore from ₹19,444 crore in the previous year.

The company is also working in energy storage to support India's grid stability and renewable integration with a focus on pumped storage projects to the tune of 20 GW. It is also active in the nuclear energy sector with an ambitious goal to develop 30 GW nuclear capacity by 2047. This is nearly one-third of the country's 100 GW nuclear power target by 2047.

"We are collaborating with various nuclear technology providers and state governments to set up projects of our own," Singh said at an event last year.

In FY25, the government gave ASHVINI (Anushakti Vidhyut Nigam Ltd, a joint venture of NPCIL and NTPC Ltd) the green light to build, own, and operate nuclear power plants. The company is executing the Mahi Banswara Rajasthan Atomic Power Project comprising four units of 700 MW reactors.

As India accelerates its energy transition while ensuring reliable power for a growing economy, NTPC, under Singh, is positioning itself at the centre of this shift. **BT**
