Stabilisation Fund, remains confident that in the short term, the conflict and rising oil prices will not impact the economy. As per an internal analysis, the ministry believes that crude oil prices at \$90 per barrel will not have a significant impact on the economy. But oil at \$130 per barrel for two to three quarters would shave off 100 basis points from GDP growth and push up inflation.

“At \$130 dollar per barrel, if the price of oil remains at that level for two-three quarters, the macroeconomic impact will be significant. CPI inflation will rise towards 5.5%. Real GDP growth will decrease from 7.4% to 6.4%. The current account deficit will increase from 1.2%, where we currently are, to around 3.2%. The fiscal deficit may rise from 4.4% to 5.6%,” Chief Economic Adviser V. An-
