

The Leader Behind a New Era in Healthcare

Dr. Tarang Gianchandani
Group CEO – Healthcare Initiatives
Chief Executive Officer – Sir H. N. Reliance
Foundation Hospital

In the high-stakes world of modern healthcare, Dr. Tarang Gianchandani has emerged as one of India's most transformative leaders. As Group CEO – Healthcare Initiatives and CEO of Sir H. N. Reliance Foundation Hospital (RFH), she is steering one of India's most respected healthcare institutions into a future that is intelligent, compassionate, driven by AI and deeply patient-centric.

A surgeon by training and a strategist by instinct, Dr. Tarang embodies a rare leadership archetype—one that integrates clinical excellence with visionary systems thinking. Her journey, shaped by global exposure across Singapore's healthcare ecosystem, including the Ministry of Health, Alexandra Hospital, and Changi General Hospital, has instilled in her a disciplined and future-ready approach to leadership. Early experiences during public health crises such as SARS and H1N1 further refined her ability to lead with clarity, resilience, and foresight.

Since 2018, Dr. Tarang has led a remarkable transformation, repositioning a century-old legacy institution into a contemporary benchmark for quaternary care in India. RFH has emerged as an integrated ecosystem of advanced care, innovation, and human-centric healing—anchored in the philosophy of Respect for Life.

One of the defining features of her leadership is innovation with conscience. At RFH, technology is pursued not for prestige alone, but to improve outcomes and expand access. This philosophy has driven the introduction of some of the most advanced medical technologies in the region—including South Asia's and India's first Naeotom Alpha Photon-Counting CT Scanner, India's first

All-in-One Bi-Plane Cath Lab, South Asia's first Genius AI 3D Mammography system, India's first Ethos Linear Accelerator for Adaptive Radiotherapy, Mumbai's first SMILE Pro powered by VisuMax 800, and Western India's first AMARIS 1050 excimer laser for vision correction. Each investment reflects not just technological ambition, but a commitment to precision, better outcomes, and equitable access to world-class care.

Yet, what truly distinguishes Dr. Tarang, is her ability to balance cutting-edge innovation with a deeply human touch. Under her stewardship, RFH has strengthened its focus on preventive and longevity-based care through initiatives like JIVITA—bringing together genomics, advanced diagnostics, imaging, and metabolic health insights to shift the paradigm from reactive to proactive healthcare. Complementing this is Jeevan, a thoughtfully designed extension of care that strengthens RFH's continuum of care through specialised chronic disease management and day-care services—including chemotherapy, dialysis, immunotherapy, paediatric chemotherapy care, albumin injections for chronic liver diseases, transfusion treatments for Sickle Cell Anaemia and Thalassemia Major, and sleep study facilities. Designed to support patients through long-term conditions with dignity, continuity, and compassion, these initiatives together reflect RFH's commitment to both proactive wellness and sustained care for those living with complex health needs.

She believes in creating specialised centres of excellence that address evolving healthcare needs holistically. The Well Women Centre offers end-to-end care across every stage of a woman's life

and is supported by one of the country's most advanced IVF laboratories. It also houses India's first Ovarian Cortex Freezing facility for young cancer patients, strengthening fertility preservation with safety and precision. Artificial intelligence is also being leveraged in assisted reproductive services, supported by Western India's first ASTEC CCM CHRONOS time-lapse incubator for continuous embryo monitoring and improved IVF outcomes. Further strengthening RFH's focus on holistic health and longevity is the Centre for Well-being & Longevity, which adopts an integrated care approach with personalised health pathways supported by a range of allied, integrative, and preventive health services, including: Genetics, Nutrition, Mind and emotional well-being, Acupuncture, Homeopathy, Vaccination etc. The Skin Health & Rejuvenation Centre adds another dimension, offering advanced dermatology, aesthetic medicine, and holistic skin wellness through personalised, evidence-based care. A defining pillar of Dr. Tarang's perspective as a leader is the strategic integration of Artificial Intelligence and digital health. At RFH, AI is thoughtfully integrated to enhance clinical decision-making, improve diagnostic accuracy, and enable caregivers to dedicate more time to what matters most: the patient. From AI-driven diagnostics, tele-ICU services, cloud-based EMRs, predictive analytics in intensive care to smart command centres and seamlessly integrated digital records, the hospital is shaping a future where care is advanced, anticipatory, responsive, and deeply personalised.

Her support has also positioned RFH as a trusted partner for national and global collaborations, strengthening its role in research, education, and clinical innovation. Recognition through multiple prestigious awards including Best Healthcare CEO of the Year by Mid-day Powerful Women Icons 2026, Woman Healthcare Leader of the Year (National) at the VOH National Healthcare Awards 2025, Women Excellence Award at the Navabharat Inspiring Women Summit & Awards 2025, and Healthcare CEO of the Year (National) at the ET Healthcare Awards 2025, further reflects the impact and credibility of her work. But beyond accolades, Dr. Tarang's true legacy lies in the institution she is building, one that is future-ready yet deeply humane, AI driven and technologically advanced yet emotionally intelligent.

In redefining healthcare leadership for a new era, she is not just shaping a hospital, she is shaping a philosophy of care where science, technology, and compassion converge to create meaningful healing experiences.
