

Today, nearly 48% of DIY customer servicing is handled by AI conversational (voice and text) BOTs. This frees up its teams to focus on more complex interactions while reducing operating load structurally. By March 2026, it expects over ₹5,000 crore personal loan business to be originated through AI-led channels. “It is fast becoming a mainstream channel for us,” says Jain.

total income should go down by 150 bps from current levels of 32.8% over the next three-four years,” says Jain.

“The automation and use of data will result in saving opex and increasing productivity,” says Akshay Tiwari, AVP—Equity Research Analyst, Asit C Mehta Investment Intermediates.

“A dramatic transition to new customer groups (e.g., heavy commercial vehicles or very high

investors were concerned about the possibility of a fintech disruption.

However, by 2025, it was evident that Bajaj’s omnichannel ecosystem, which includes more than 100 million customers, has created an impenetrable fortress for any digital-only applications,” says Juneja of Fortuna Asset Managers. “There was some momentum in 2025 even as the broader market was down due to the strong AUM growth of 20%-plus, when banks and other financial companies struggled to see credit offtake,” says Akshay Tiwari of Asit C Mehta Investment. Tiwari says the company has outlined its LRS (Long Range Strategy) 2026-2030 to maintain strong growth momentum in varied segments. “The company has delivered strong executional capabilities in the past, which makes the street confident about the LRS. The LRS includes new avenues such as green financing where the company has limited presence. The stock price saw momentum owing to customer addition momentum, credit growth, and LRS 2026-2030,” he says.

Be it succession or AI, Bajaj Finance is taking the challenge head-on. “The previous leadership of Rajeev Jain has built the ‘disruptive execution machine’. The new leadership of Bajaj Finance is not just leading a business; they are actually leading a proprietary algorithm. The criticality is in keeping the culture consistency,” says Juneja of Fortuna Asset Managers.

And Rajeev Jain is not going anywhere. The Sanjiv Bajaj–Rajeev Jain combination will steer the company at the board level as late Rahul Bajaj & Nanoo Pamnani did in the first phase of the company’s growth journey. **BT**

TOP NOTCH

● After HDFC Ltd’s merger with HDFC Bank, Bajaj Finance is the largest NBFC in India ● Muthoot Finance has highest secured assets as well as the best return on assets

RANK	BANKS	ASSETS	3-YEAR GROWTH IN BORROWINGS	COST-TO INCOME RATIO	SECURED ASSETS	ROA

By FY26, the company foresees nearly 300,000 plus DMS (debt management services) receipts through AI voice systems. “Our developers are seeing a 25% rise in productivity through AI coding assistants, and 25k+ test cases are now generated autonomously. We see the numbers increasing in FY27. This allows us to ship features faster and with higher quality,” says Jain. “Operating expenses-to-net

value mortgages) may cause the company to generate a temporary spike in credit costs. However, we believe that the company will make the transition smoothly as it has created a strong risk-first DNA,” says Gurvinder Juneja, Partner, portfolio management services firm Fortuna Asset Managers.

STOCK PERFORMANCE

From 2022 to 2024, the company’s stock price remained stagnant as
