

Tata Motors) for digital transformation. This was a key part of JLR’s Reimagine strategy. A year later, that partnership was expanded to enhance connected vehicle capabilities across 120 countries.

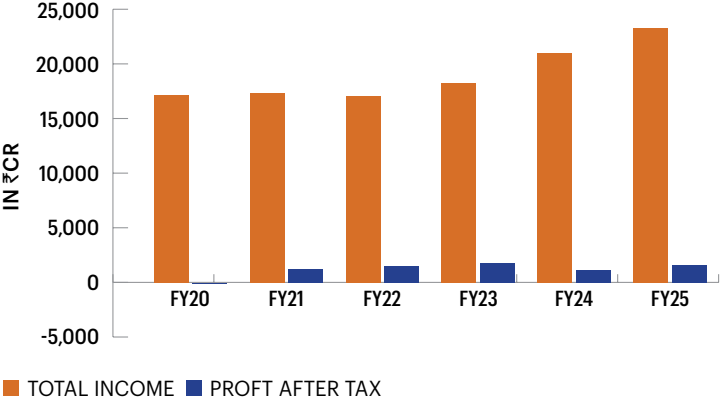

Sumeet Walia, EVP & Chief Sales & Marketing Officer, Tata Communications, thinks this was important to drive home the point on how they could be relevant to customers. “If you ask JLR today a question on Tata Communications’ relevance in its own ecosystem, there is a good chance they will speak of us as being a core part of their central digital nervous system. That’s the strength of relevance that we have managed to reach,” he says.

Understandably, this is not an easy process. According to Walia, positioning technology is only part of the story. “But by positioning myself to have the ability to solve a customer’s problem, I need to understand the problem first. So, it is that pain-gain equation that we are really trying to work with,” he says. Much of that progress made has not been missed by those who track the company. “Of course, Tata Communications has a complex model. The digital part has multiple legs with AI, data centres, IoT, 5G/6G. The interesting part is that each is getting integrated with the business,” says Deven R Choksey, Chairman and MD of wealth management and investment advisory firm DRChoksey Finserv. The challenge, he says, lies in existing customers being more demanding, making the process of continuous innovation critical. “To that extent, scaling up will always be tricky. The business overlap with group companies like TCS, Tata Elxsi does exist, though scale and size will differ,” he says.

How much has changed at Tata Communications over two decades is a crucial story. Vibhor Singhal, Executive Director, Nuvama Institu-

STEADY TURNAROUND

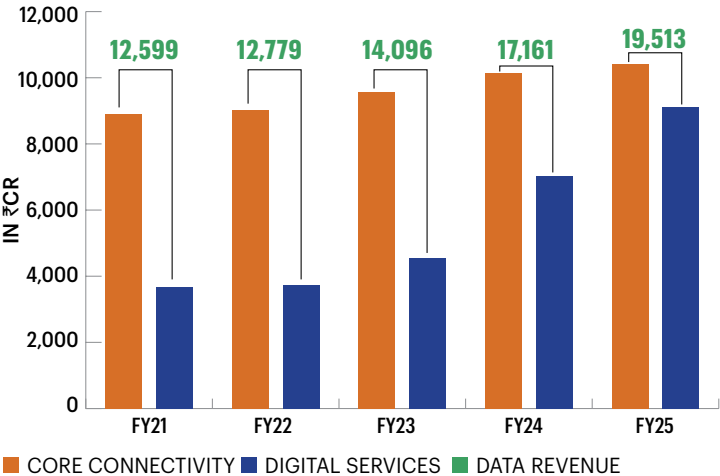

- The company has emerged stronger after a difficult period
- The improving financial position is encouraging acquisitions
