

that at anytime in the future AI will replace astrologers, Pandey says AI is as big as the industrial revolution and people are failing to see that. “If not evolved with the tech, all apps will die and that also stands true for AstroSage, hence, we are playing big on integrating AI in our app.”

Elaborating on AI’s role in the age-old practice of astrology, Pandey explains that AI functions like a “big brain.” He likens its structure to the human brain, where neurons correspond to parameters in an Artificial Neural Network (ANN). The key difference, he says, is scalability.

“In humans, the number of neurons is fixed—say, I have 80 billion neurons, but I can’t add another 100 billion. That’s a natural limitation,” he says. “AI, on the other hand, can continuously expand its parameters through artificial neural networks and transformer models, making the ‘brain’ scalable.”

Pandey says this scalability gives AI an edge. “Whatever you teach or feed into this AI brain, it can replicate and enhance, making it far more precise than humans. If trained in astrology, AI could be a thousand times more accurate simply because it has more parameters to process and analyse.”

In January 2025, Astrosure.ai, an app providing real-time, personalised astrology-based insights, raised \$6 million in a seed round led by Pradeep Dadha, investor and CEO of Netmeds Marketplace Ltd. Unlike traditional platforms, Astrosure.ai does not on-board astrologers and

“Privacy concerns are more prominent now, especially among young people, who prefer the anonymity and convenience of online consultations”

ANKUSH KAKKAR

FOUNDER AND CIO, ASTROSAGE AI

instead engages users through its chatbot, Agastyaa. Vanya Mishra, the app’s founder, explains that its target audience is the younger generation, who often seek mental well-being without the intimidating presence of traditional astrologers. “Agastyaa serves as a companion, offering answers and support whenever users need it,” Mishra adds.

HANDSOME PAYBACK

Investment in astrotech is paying back. Indian astrotech start-ups are performing strongly, with many achieving sustained monthly revenues over \$1 million. Their revenue models primarily revolve around consultation fees and e-commerce sales of products like bracelets and
