

and AI-driven radiology diagnostics. These innovations help clinicians make data-backed decisions, reducing response times for critical cases.

With the advent of Generative AI models like GPTs and large language models (LLMs), we are integrating these technologies into departments such as procurement, HR, and secretarial functions. We are also embedding them into our Electronic Medical Records (EMR) systems to enhance clinician adoption and efficiency.

What are some of Kauvery's Centers of Excellence?

Kauvery has established Centers of Excellence in Pediatrics, Cardiology, Oncology, Neurosurgery, Orthopedics, and Gastroenterology. Our cardiology department includes nearly 50 interventional cardiologists working full-time across our hospital network. We are a referral center for electrophysiology and conduct complex cardiac surgeries at several locations.

We also have a leading transplant program, performing nearly 200 renal transplants annually. One of our tier-2 hospitals has been consistently recognized by the Tamil Nadu government for conducting the highest number of kidney transplants under government schemes. Five of our centers are approved for liver transplants, and one center has accreditation for cardiac and lung transplants.

In neurosciences, we run a strong stroke intervention program, coupled with high-end neurosurgical procedures that leverage minimally invasive techniques. Recently, we introduced robotic surgery at two of our hospitals, significantly improving outcomes in Urology, Oncology, and Gynecology.

Given the increasing geriatric population, our hospitals have robust joint replacement programs and dedicated geriatric care services, ensuring elderly patients receive

specialized attention.

How is Kauvery moving towards personalized treatment?

Personalized treatment is the future of healthcare, and while we are still in the early stages, we are leveraging AI to analyze laboratory and clinical data for personalized interventions. By understanding disease patterns and patient history through data analytics, we can develop tailored treatment plans for individuals. This field holds tremendous potential, and we are investing in technology to enhance this capability in the coming years.

What steps has Kauvery taken to ensure quality and patient safety?

Quality and patient safety are at the core of our operations. We have built a dedicated team that ensures adherence to quality protocols. Our hospitals leverage IT systems for real-time tracking of patient data, using automated alerts to identify potential critical events. This allows back-end teams to proactively inform clinicians and intervene before complications arise.

All our hospitals are NABH-certified, and one of our centers has also achieved JCI accreditation. Additionally, we have a strong risk management committee at the board level, which monitors over 300 risk indicators regularly. This helps in maintaining a high standard of patient safety across all our hospitals.

How does Kauvery ensure affordability and accessibility of healthcare?

With most of our hospitals located in tier-2 towns, affordability is a major concern. A significant portion of our high-end procedures is conducted under government insurance schemes. Our back-end team meticulously tracks patient costs, including investigations, medications, hospital stays, and consumables, to ensure affordability.

By integrating cost-effective care into our organizational culture, we have been able to bring advanced

medical procedures to tier-2 cities at government-subsidized rates. This has significantly improved accessibility for patients who would otherwise struggle to afford tertiary healthcare.

What is Kauvery doing in the field of mental health and emotional well-being?

Mental health is an often-overlooked aspect of healthcare, particularly for post-ICU patients and those recovering from major surgeries. While we have a dedicated psychiatry team, we recognized the need for a stronger psychological support system. To address this, we are actively building a psychological wellness team.

Moreover, we have observed that healthcare professionals, including doctors and nurses, work in highly stressful environments. To support their mental well-being, we have introduced the KUSHI initiative—an emotional wellness program designed to offer counseling and resilience training to our employees. We are also collaborating with happiness coaches to help healthcare workers maintain emotional balance in their demanding roles.

What is the vision for Kauvery in the coming years?

Kauvery remains committed to its core values of ethical practice, cost-effective care, and a personal touch. Our expansion plans focus on strengthening our presence in tier-1 and tier-2 cities while maintaining affordability. We are also continuously exploring AI-driven tools and predictive analytics to further enhance patient-centric care.

With the integration of digital healthcare solutions, Kauvery aims to revolutionize the way healthcare is delivered—making it more accessible, efficient, and patient-friendly. We believe that leveraging technology, upholding ethical medical practices, and expanding to underserved regions will help us shape the future of healthcare in India.
