

Shaping a Sustainable Future: Growing demand for Aluminium Cans in Beverage Packaging

Manish Joshi
Commercial Director, Asia- Ball Corporation

Can you tell us about Ball Corporation and what sets it apart as a leader in the industry?

Ball Corporation supplies innovative, sustainable aluminum packaging solutions for customers in the beverage, personal and home care product sectors. With nearly 150 years in the packaging business and 16,000 employees worldwide, Ball is all-in on aluminum packaging for its customers and offers the widest portfolio of aluminum packaging solutions in the industry.

Ball believes that what we do today has meaningful impact on our collective future. We lead with integrity, building trust as a reliable company that employees, customers, suppliers and investors can count on. We genuinely believe in the sustainability attributes of aluminum packing and are united in our determination to do the right thing, as we strive to create a world free from waste.

What is the potential of metal packaging in India?

The potential for metal packaging in India, especially aluminum cans, is remarkable and poised for significant growth. Canned beverage market in

India is expected to grow by 12,8 % in the next 5 years, driven by a combination of shifting consumer preferences towards convenience and sustainability, rising product launches and increase in beverage consumption. As sustainability becomes a priority for consumers and customers, metal packaging, known for its recyclability and durability, is emerging as one of the key solutions.

India is uniquely positioned for this transition. With a growing middle-income population, evolving lifestyles, and increasing environmental awareness, consumers are now seeking packaging solutions that align with their values and contribute to a sustainable future. Aluminum cans, in particular, offer an ideal balance of functionality and sustainability, making them a preferred choice for beverage packaging. The future of metal packaging in India is bright, with tremendous room for expansion. As adoption grows, this shift will not only drive market growth but also contribute to a more environmentally responsible packaging landscape.

What are the key focus areas in leveraging

sustainable practices? Please tell us the integral actions Ball has taken so far?

As demand for sustainable aluminum packaging grows, we are committed to developing low-carbon, circular solutions. Increasing the recycled content in our products is our most significant decarbonization lever. Recycling aluminum saves up to 95% of the energy required to produce new aluminum from raw materials. We have set an ambitious target to achieve an 85% recycled content goal by 2030 for aluminum cans, cups and bottles in the regions where we operate. This commitment will be realized through ambitious government recycling policies and substantial industry investments that increase the global supply of recycled aluminum.

Why should India look at aluminium as an innovative packaging solution?

India should consider aluminum as an innovative packaging solution because of its remarkable sustainability and functionality. With increasing consumer demand for circular packaging and growing government efforts to reduce environmental impacts—especially from beverage packaging—aluminum presents itself as the clear choice.

Aluminum is fully recyclable, supporting a circular economy and offering a solution to reduce packaging waste. Its lightweight nature not only makes transportation more efficient but also helps in reducing storage costs. Additionally, aluminum offers practical benefits like fast chilling, portability, and tamper-proof security, which help ensure the safety of products and minimize losses from breakage.

Beyond its functional advantages, aluminum packaging provides significant branding opportunities. With 360-degree printing and innovative graphic options—such as matte finishes, HD printing, glow-in-the-dark effects, and thermochromic inks—brands can stand out in a competitive market and enhance consumer engagement.

By embracing aluminum packaging, India can contribute to environmental sustainability, meet its sustainability targets, and tap into innovative solutions that benefit businesses, consumers, and the planet.
