

# Polymatech's Path to Dominance

**Polymatech is revolutionising India's semiconductor landscape, driving innovation and setting new industry benchmarks. As the country's first opto-semiconductor company, headquartered in Chennai, Polymatech is dedicated to making India a global powerhouse in semiconductor manufacturing. Under the leadership of Mr Eswara Rao Nandam—an alumnus of BITS Pilani, a visionary entrepreneur with a deep commitment to technological advancement, the company is redefining the landscape of semiconductor packaging and production. Since its inception in 2019—built on a strong manufacturing legacy dating back to 2008—Polymatech has been instrumental in bridging the technological gap, enhancing domestic supply chains, and positioning India as a global leader in semiconductor innovation.**

Polymatech Electronics Ltd.

## **Driving India's Semiconductor Growth with Cutting-Edge Manufacturing and Global Partnerships**

With the global semiconductor market projected to reach \$1 trillion by 2032, India is expected to contribute \$100 billion, and Polymatech is at the forefront of this transformation. The company's Chennai facility specialises in optoelectronics packaging, producing high-performance LED chips and laser diodes for critical industries such as Healthcare, Automotive, and Consumer Electronics. In California, Polymatech has been manufacturing semiconductor testing and failure analysis equipment

for over five decades, serving leading semiconductor and automotive companies worldwide. Expanding this expertise, a new manufacturing facility is being established in Kerala.

Polymatech is also advancing India's telecom technology sector through its telecom device packaging facility in Chhattisgarh, supporting 5G and next-generation network infrastructure with chip designs developed in collaboration with Professors of Cardiff University, UK. Strengthening India's semiconductor supply chain, the company's Nagpur facility is setting new benchmarks in ingot and wafer manufacturing, enhancing the country's position in the global market. By producing high-quality monocrystalline and polycrystalline silicon, silicon carbide, and sapphire ingots, the facility is reducing reliance on imports and ensuring a steady supply of essential raw materials for chip fabrication. This initiative underscores India's capability for vertical integration in the semiconductor sector, creating a strong foundation for future chip design and fabrication. In collaboration with ECM, France, the facility is driving the production of advanced ingots and wafers.

Beyond manufacturing, the company is fostering an ecosystem of innovation, research, and skilled workforce

development, ensuring India's leadership in the global semiconductor industry through sustainable and AI-driven technologies.

## **Polymatech Unveils Next-Gen Semiconductor Innovations at ISPEC 2025**

Reaffirming its commitment to India's semiconductor growth, Polymatech recently launched its latest product line at the Indian Semiconductor and Packaging Ecosystem Conference (ISPEC) 2025 being conducted at Mahatma Mandir, Gandhi Nagar, Gujarat. The introduction of Sapphire Ingot, Sapphire Wafer, and the groundbreaking 6G Telecom Die marks a major milestone in India's semiconductor industry. These advancements are designed to enhance efficiency, durability, and technological sophistication, positioning India as a key player in the global semiconductor supply chain.

Globally, Polymatech Electronics is not just building semiconductor packaging and manufacturing plants; it is fostering an ecosystem of innovation, research, and skilled workforce development. Gujarat's growing reputation as a semiconductor hub makes it the ideal location for this landmark announcement, strengthening the country's ambitions to become a semiconductor powerhouse. By introducing advanced semiconductor
