

lower-rated app appeared. Can you explain what happened?

A: We rapidly scaled up users from single digits to millions in a year. To handle this growth, we needed a more scaleable and modular app. There were several things that we couldn't do earlier. For example, if we have to change a feature in the app, we don't have to push another full update on the app. We can just change the feature itself or we can turn it on or off. All those things were not possible in the first app. I do agree that the transition was perhaps not the smoothest. But we did have our own learning lessons. The old app now gives a prompt to move to the new app.

Q: The goal is to move to the new app?

A: Yes, and we've made significant progress. Almost half of the users have transitioned, accounting for 2 million users. We earlier had around 4.5-5 million users.

Q: The previous app offered value-added services like booking cabs. Are there plans to integrate more services under the Digi Yatra umbrella, making it a super app?

A: We don't want to be a super app, but we do want to

make meaningful interventions throughout your travel journey. **We're looking beyond airports to include booking cabs and identity verification at hotels, all the while preserving user privacy.** Our vision is to be the travel stack of India, providing a secure and private way to validate your identity at any public place.

Q: Established travel apps offer various services. What will Digi Yatra offer?

A: Convenience is our main focus. We aim to make the entire travel journey seamless and hassle-free. Many travellers already use these terms, so we emphasise on a smooth and effortless experience.

Q: What is Digi Yatra's ownership and governance structure?

A: The Digi Yatra Foundation is a non-profit organisation. Its purpose is not to generate revenue or profits. Our sole motive is to provide a seamless travel experience. The operational costs are borne by the airports, who are our shareholders. We have a board of directors that includes CEOs of public-private partnership airports and a representative from the Airports Authority of India (AAI). This board reports to the Digi
