

ADANI'S RENEWABLE ENERGY PROJECT IN KHAVDA WILL POWER OVER 16 MILLION HOMES

Adani Green Energy Limited (AGEL), India's largest and one of the world's leading renewable energy (RE) companies, has operationalised cumulative capacity of 2 GW solar energy at the world's largest RE park at Khavda in Gujarat. AGEL delivered this milestone in less than 12 months of commencing work at Khavda. The accelerated progress underscores AGEL's commitment to India's goal of achieving 500 GW non-fossil fuel capacity by 2030.

A GEL plans to develop 30 GW at the world's largest RE project situated on the barren land of the Rann of Kutch. Built across 538 sq km, it is five times the size of Paris and almost as

large as Mumbai city. A total of 81 billion units will be generated at the site, powering over 16 million homes annually in India (nearly equivalent to the number of homes in entire Poland and Canada). The

energy output can power entire nations like Belgium, Chile, and Switzerland. Land for this strategic RE park was identified near the Vighakot BSF Post in Kutch district under the Gujarat government's
