

DR. SATYAJIT BOSE'S MISSION

AFFORDABLE HEALTHCARE FOR ALL

The Chairman of The Mission Hospital at Durgapur, Dr. Satyajit Bose has successfully taken healthcare within the reach of the hoi polloi, in terms of outreach and affordability too. He has a clear vision to create an affordable, accessible and sustainable healthcare system in India, that is at par with the best in the world.

Dr. Satyajit Bose, Chairman & Sr. Consultant Cardiac Surgeon

Our nation is transforming itself into a juggernaut of progress, changing its identity to emerge as a modern, contemporary nation in the world. However, healthcare is still a nagging area of concern. Recollecting that Mahatma Gandhi said that India lives in its villages, Dr. Satyajit Bose notes, "As a nation we haven't built an equitable healthcare system where the rich and the poor, the city, the towns and the villages have access to equal healthcare infrastructures. You may say that it is difficult to create such a system in a country like India. I say that it is possible and doable".

Dr. Bose certainly knows. He has persevered to create an institution that does just that. The NABH accredited Mission Hospital Durgapur were the first to initiate quaternary healthcare in a Tier 3 City, catering to adjoining districts, states and SAARC countries. Slowly, it grew to become a 600 bedded hospital. It is now transforming into a 1000 bedded Super-specialty Cancer, Trauma and Critical Care Centre, in a 20 acre plot near Durgapur Airport. All of this, modelled on the tenets

of affordability, accessibility and sustainability. His business model has featured in the Harvard Business Review and is taught as a case study across business schools in the US.

Dr. Bose presents his pattern in a lucid, easily understandable way.

Reduce the Cost of Setting up: Dr. Bose says that the private sector and the government need to come together to create an equitable healthcare system. The private sector has the expertise to execute and implement while the government should become the enabler. The government can reduce the infrastructure costs significantly by providing land and uninterrupted power. With attractive breakeven in sight, the private sector will foray into the faraway places creating a wide net of hospitals, clinics and care centres catering to a larger audience.

Train Manpower & Create Local Employment: The private sector can train people from the local geographies, creating jobs for local people. A simple system of incentive based and modelled on the parameters of patient satisfaction – the erstwhile methodology of 'Net Promoter Scores' can run the roster and decide the salary.

Healthcare Insurances : There needs to be a three way dialogue between the insurance companies, the healthcare providers and the government to help arrive at a minimum amount that is needed as a cover for basic healthcare expenses. Insurance companies and governments should open up a dialogue that allows them to create robust schemes for every strata of society.

Embracing Technology : These days simple things like an ECG, blood pressure, blood oxygen level can be measured with our handheld mobile devices. Creating hub and spoke models across the country can enable

simple e-hospitals and e-clinics to cater to smaller places.

- By leveraging telemedicine and mobile health platforms, healthcare services can be directly delivered to people in rural and remote areas.
- Implementing robust health information systems to track health outcomes, disease patterns, and resource allocation will ensure that healthcare resources are allocated efficiently and effectively where they are needed the most.
- By using artificial intelligence and predictive analytics, health risks and trends can be identified early, enabling proactive interventions to prevent diseases and improve health outcomes. This can significantly reduce the burden on the healthcare system in the long run.

Dr. Bose empathetically states, "By combining these strategies focussing on preventive healthcare, health education and primary care, we can truly democratize healthcare in India. It's time to think outside the box and embrace a more inclusive and sustainable approach to healthcare delivery".

Upcoming 1000 bedded cancer & Allied Superspecialty Hospital in Bengal Aerotropolis, Durgapur Airport
