

DIGITISATION OF ADANI AIRPORTS TO ENHANCE OPERATIONAL EFFICIENCY, CUSTOMER EXPERIENCE & SUSTAINABILITY

Digital transformation in airports uses technological advancements to enhance safety and security while streamlining their operations. Adani Airports Holding Ltd (AAHL), a subsidiary of Adani Group, has embarked on a digital transformation journey to enhance its operational efficiency, customer experience, and sustainability. It is investing in cutting-edge technologies, including AI, IoT, Big Data, Video Analytics and others to create a future-ready, next-generation airport ecosystem that multiplies value across all facets of operations.

AHL is one of the largest airport operators in India, with a portfolio of seven airports across the country. The eighth one will be operational by mid next year. Investment in digitisation is a strategic and visionary move that can help the company gain a competitive edge, improve its performance, and create value for its customers and stakeholders. Digitisation of airports can help passengers and benefit the company multi-fold.

Improved operational efficiency: By leveraging technology AAHL optimises its processes, reduces costs, and increases productivity. For example, the company uses smart sensors and cameras to monitor the airport infrastructure, automate the baggage handling system, and enable real-time data sharing among departments and agencies for enhanced coordination.

Enhanced customer experience: By adopting digital solutions such as biometric identification, self-service kiosks, mobile applications, and digital signage, AAHL enables the airports to offer a seamless and personalised journey to its passengers. For example, the company uses facial recognition to expedite security check and boarding processes, and provides digital boarding passes, e-tickets, and customised offers and recommendations via the Adani One B2C platform based on passengers' preferences and behaviour.

Increased sustainability: By implementing Building Management Solution, Adani airports reduce their environmental impact and carbon footprint. For example, the company uses solar panels to generate clean energy, LED lights and motion sensors to save electricity.

INITIATIVES TAKEN IN LAST ONE YEAR ACROSS THE AIRPORTS

AAHL's strategic focus encompasses revenue generation, optimised operations, safe and secure environments along with an unwavering commitment to carbon neutrality by 2029. In 2023, several digital steps were initiated and accomplished, setting forth the foundation for its digital transformation roadmap focused on the passenger experience and efficiency.

■ DigiYatra, a Ministry of Civil Aviation initiative, was implemented for seamless check-in.

■ State-of-the-art technologies like biometric-enabled DigiYatra self-service boarding gates,

common-use check-in kiosks, baggage drop units, and smart security lanes were deployed.

■ Most terminals are also equipped with automatic Wi-Fi coupon code kiosks for use of international passengers, saving them from the hassle of sim card availability and OTPs.

■ In addition, Ahmedabad international airport is now enabled with modern In-Building Solution to enhance mobile coverage experience and achieve 5G speed for
