

communication. The next financial year will see this service extended across other airports.

■ A cloud-based airport management system, AViio Smart Airports Platform, has been kick-started that integrates all the key functions of the airport operations, such as terminal management, ground handling, air traffic control, and emergency response, and facilitates data-driven decision making and collaboration. Acting as the backbone for all the digital transformation initiatives, Avio platform is placed to set benchmark in the airport operations across globe. The vision for Avio encompasses the development of a cutting-edge Smart Airport Operations System, conceived as a replicable model of an "Airport-in-a-Box".

■ Avio platform will power Avio Unified Communications App, a multipurpose app designed to revolutionise stakeholder collaboration enabling all airport internal and external stakeholders with improved situational awareness and for informed decision making.

■ With a focus on automation, Robotic Process Automation (RPA) Centre of Competence was launched to lever-

age the power of software robots, or 'bots' to automate repetitive and rule-based tasks within our business processes. These bots interact with our existing software systems, databases, and applications to execute tasks with precision and speed, paving a highly effective way for our business to improve efficiency, accuracy, and scalability.

CYBERSECURITY

Cybersecurity is at the core of all operations. The company is investing in building a safe, secure and resilient infrastructure that boasts of a healthy cyber posture. Some of the examples are:

■ Network segmentation: New Lucknow Airport Terminal 3 became operational with state-of-the-art network architecture, diving the main network into multiple, smaller subnetworks to better protect sensitive data and limit lateral movement to the rest of the network, boosting both cyber security and operational efficiency.

■ The IT assets have real-time monitoring and data backup services enabled, making them secure against

data theft or cyber attacks.

Over the last year AAHL focused on strengthening its cyber posture. With tool-based monitoring, the company improved its proactive addressal of risks, potential threats and ensured high reduction of cyber risks from operational technology solutions.

Going forward, AAHL plans to launch an Airport Experience Centre for sandboxing and incubating new technology for continued aviation-tech leadership. Avio will be catering to different stakeholders at airport, including Airlines, CISE, Service Providers, concessionaires and ground handlers.

AAHL is committed to ensuring improvement of digital dexterity and adoption of all new digital initiatives towards a Digital-First Enterprise. AAHL's vision is to create a digital-first airport ecosystem that is a beacon of innovation, sustainability, and seamless convenience for generations to come.
