

KEEPING TIME Raynald Aeschlimann, President and CEO, OMEGA (left), and Alain Zobrist, CEO, Swiss Timing Ltd

innovating. We need to keep pushing the boundaries and delivering that same standard of quality. If we do that, then more of these authentic stories will naturally be created.

How does OMEGA balance the heritage of craftsmanship with technological advancements?

RA: Balance is important. We always begin with our iconic collections as a basis. This connects us to our past and keeps us present amongst traditional watch enthusiasts.

However, we can't rely on the past alone. Therefore, we are constantly developing new

materials, or more precise calibres, or unique new features that give our classic collections a modern edge. Look at the Speedmaster Dark Side of the Moon, or the Seamaster [Aqua Terra] 'Ultra Light'... They are bold, creative, and innovative evolutions of our most beloved timepieces.

What are the challenges and opportunities the luxury watch industry faces today? How is OMEGA positioned to navigate them?

RA: Some challenges are outside our control, such as political or economic upheavals that can have effects across the luxury

industry. Other challenges may be about getting customers excited, and developing products that have perceived value and authenticity. I think OMEGA is at an advantage. We've built a reputation for quality. As I mentioned earlier, it's about maintaining and even pushing your standards, so that you are always seen to be progressing and doing the very best for your customers.

Alain, as CEO of Swiss Timing Ltd, what excites you most about the future of sports time-keeping? What are your personal aspirations

for the company?

Alain Zobrist: Looking ahead, I'm excited about the storytelling we can bring into sports. OMEGA is a leader in the measurement of performance data and we're beginning to capture some really interesting insights. With our evolving Computer Vision and AI systems, we'll really be able to show the world how an event is won or lost and compare different techniques. It perfectly highlights the innovation we have at OMEGA, and my own personal goal as CEO is to keep inspiring that pioneering spirit amongst all of the time-keeping team. **BT**
