

P

PRIME MINISTER NARENDRA

Modi, during the 78th Independence Day speech, outlined India's commitment to becoming a global leader in semiconductor production. This highlights the country's mission to reduce dependency on imports and enhance technological self-sufficiency.

India accounts for close to 10% of global semiconductor consumption but lacks manufacturing capabilities. With a strong policy push, the country is now eyeing a demand of \$272 billion by 2032 and aims to become a global semiconductor manufacturing hub.

POLICY PUSH

The production-linked incentive (PLI) scheme, introduced in December 2021, has acted as a catalyst, with big players like US-based chipmaker Micron, salt-to-software conglomerate Tata group, and the Murugappa group setting up manufacturing facilities.

The government has also announced a substantial allocation of \$10 billion under Semicon India Program for the semiconductor and display manufacturing ecosystem. Of that, around \$2 billion was disbursed last fiscal (FY24) and another \$4 billion is expected

MISSION (ISM)

➔ **Indian semiconductor industry likely to reach \$109 billion by 2030, up from \$38 billion in 2023**

➔ **India has 20% of the world's semiconductor design workforce; the government has approved three chip-related projects worth about ₹1.26 lakh crore in 2024**
