

Then we got into Ola Electric, and then most recently Ola Krutrim. And each company has a very broad vision. For example, Ola Cabs, which we now call Ola Consumer, wants to create a tech-driven consumption platform to enable access for all. We recently partnered with ONDC. We're doing a lot of things on electric logistics, automation of warehousing, etc. [Coming to] Ola Electric, the biggest challenge for our generation is to solve for climate change and sustainability. But the world right now is solving for it by

selling luxury cars to the West. That is a solution only for a billion people. The other 7 billion need a different solution, and India is a microcosm of these people. When we set out with Ola Electric, we said that we'll build products relevant for India—two-wheelers, three-wheelers, small cars—and the core technology that will enable those products. That's why I once said, 'Tesla is for the West, Ola is for the rest.'

There's a lot of thought behind that statement. The products that companies like Tesla build are for the
