

BECQUER ENERGY HARNESSES SOLAR POWER FOR INDIA

A global solar energy solutions innovator and provider, Becquer Energy, a clean energy technology manufacturer with its genies in Singapore, sees itself in a pivotal role in India's energy landscape contributing towards the clean energy targets and overall energy security of the nation. With focus on research, innovation, cutting-edge technology and futuristic strategy, Becquer, is propelling India towards its ambition of becoming a solar superpower and amplifying sustainability. The company is proud of an impressive profile, offering products of high quality and performance, yet value for money.

The founders of Becquer Energy, are on a daring mission to harness and catapult solar power to the forefront as the planet's premier and most cost-effective power source for supporting sustainability. India serves as a dynamic partner for the team to translate their formidable expertise in solar engineering to sculpt products meticulously tailored to meet both brand goals and the increasing energy demands of a humongous consumer base. The electrifying partnership is all the more significant as India is exploring options to reduce the burden of exorbitant fuel import costs and dependency on China's energy dominance, as well.

In 2023, India generated 113 billion units (BU) of solar power in 2023 compared to Japan's 110 BU and surpassed the 'Land of the rising sun' to become the world's third-highest producer of solar power, as reported by international energy analytics agency Ember. The vast possibilities of leveraging this advantage of a robust solar energy tech market and put its expertise to work, is Becquer's gain through and through. By honouring brand promise and impeccable customer service, the company has further moved up on the scale of reliability.

Globally, known for its lowest cost solar hardware and comparable to the best in quality, the company is consistently conquering new frontier of innovation that

are spearheading groundbreaking initiatives. Becquer's cutting-edge manufacturing hub in Asia, buzzes with advanced robotics seamlessly intertwining with human ingenuity to produce high-end silicon-based materials for solar applications. This isn't just about production—it's about revolutionizing the solar scene not only at home, but also with partnering countries by participating in the global sustainability efforts aimed at zero carbon footprint by 2050.

Downstream, Becquer's innovations are reshaping the solar energy landscape with its products which are embedded with robotic cleaning technology especially designed for cleaning solar panels. This innovative solution ensures maximum efficiency and performance by keeping solar installations clean and optimized. Currently this technology is being utilized in one of Asia's largest industrial parks located in Chennai.

Also, in addition to traditional rooftop installations, Becquer, has pioneered the development of unique Vertical Solar Facades, which are innovative solar panels that can be mounted on the walls of buildings, offering a versatile and space-efficient solution for harnessing solar energy. This technology represents a significant step towards integrating renewable energy seamlessly into urban environments.

From battery-compatible, fire-safe solar roofs to ground-mounted marvels, Becquer Energy is providing game-changing solutions to Fortune 500 giants like Amazon, Bacardi, Texas Instruments, Grupo Bimbo, Luv Group and Arkema. Overcoming hindrances that were impeding adaptability and scalability of solar energy, these semi-automated panel cleaning devices are completely puncture-free attachments to the roofs, walls and ground surfaces that ensure no water leakage, serve as flexible solar structures for every roof type, and are fully detachable systems ensuring seamless integration without any glitch.

In its relentless quest to make solar power the undisputed champion of energy that can transform manufacturing as a sector, Becquer continues to expand its global footprint by raising its benchmarks through product innovation in the rapidly growing solar energy sector. For this, Becquer Energy is recipient of several recognitions such as the "Most Promising Brand" in the energy category by Economic Times underscoring its commitment to innovation and sustainability. With a board comprising individuals who have played pivotal roles in designing national initiatives such as the National Apprenticeship Program for the Government of India, Becquer is deeply invested in fostering growth and innovation in sectors like renewable energy.
