

AI, blockchain, and quantum computing are expected to revolutionise trading and market efficiency

Equity market capitalisation may expand to \$50 trillion by 2047

| 89

WHAT WILL BE the state of the stock markets in 2047? Reading the tea leaves makes one thing clear: the next 23 years are going to be an exciting ride for India. Over the past three decades, the equity markets in India have undergone a remarkable transformation—evolving from desktops to smartphones and from ring-based to algorithm trading—defying all expectations. Going ahead, there are expectations that the economy could reach \$30-35 trillion by 2047. This growth could potentially be beneficial for equity investors as more and more of them are flocking to the markets.

Analysts predict a strong stock market ecosystem in India by 2047, supported by favourable demographics, technological progress, and economic expansion, making it an ideal destination for investment. Manoj Bahety, Founder & Fund Manager, Carnelian Asset Management & Advisors, says, “Investing in India today is a once-in-a-lifetime opportunity. The most important mega-trend is the demographic dividend, which will drive structural changes across sectors. India will contribute around 25% to the incremental global workforce and remain the youngest country for the next 30 years.”

This demographic dividend will lead to a consumption boom, presenting India as a
