

ADANI GROUP'S CEMENT BUSINESS EXCELS AS IT ADVANCES TOWARD 140 MTPA TARGET

Ambuja Cements and ACC, the cement and building material companies of the diversified Adani Portfolio are making strides towards a cement capacity of 140 MTPA by FY'28. To achieve overall market leadership and to become the lowest cost cement manufacturer, the Adani Group's Cement Business is ensuring it delivers maximum performance on each of the key parameters including Digitisation, Logistics, Green Power and Cost.

It takes real Courage, Trust, and Commitment to not just lead the way but to shine out like a bright light among their peers and set new benchmarks for the entire Indian cement industry.

Pioneering Digital Initiatives

The commitment of Ambuja Cements and ACC towards innovation will redefine the construction landscape through a series of visionary digital initiatives. The Companies are steadfastly pursuing operational excellence and customer-centric solutions with cutting-edge digital initiatives:

- **NexGen Sales & Reward Platform** is a digital ecosystem designed to foster seamless collaboration among customers, channel partners, retailers, influencers and sales partners by streamlining coordination and operations.

- **Plants of the Future** programme is being implemented to digitally transform manufacturing processes to improve production quality and reduce costs. It incorporates robotics for automation across facilities, weighbridges, quality testing, plant shutdown management, and drones for maintenance.

- **Command-and-Control** programme is an Industry 4.0-based pioneering visual platform showcasing critical business data, insights, and

exceptions. It harnesses advanced analytics to optimise strategies for maximum output. In phase 1, the Companies have developed the Cement Network Operating Centre (CNOC) dashboard.

- Teaming up with the Adani Group's **AI Labs** enables harnessing the power of artificial intelligence through the integration of generative AI capabilities, video-based analytics and optimiser functionalities. This will further accelerate decision-making processes and elevate customer interaction efficiency.

- Implementing **advanced logistics and fleet management** tools by revamping vehicle tracking and transportation management systems. Leveraging technologies such as GPS, RFIDs, and advanced track-and-trace algorithms, these enhancements provide real-time vehicle location and estimated arrival times, enabling safety, and coordination for enhanced efficiency.

- Towards cybersecurity, **Adani's ISO 27k[1] certified central cyber defence and security operations centre** ensures enterprise-grade security, safeguarding the integrity of the companies' operations.

Superior Supply Chain
