

SAVERA ENGINEERING DAWN OF A NEW SECTOR IN INDIAN MANUFACTURING HISTORY

By nature Entrepreneurs are perfectionists. And they are ambitious. But when they are willing to wager their excellence against the best in the world and emerge victorious, they make the nation proud, opening new avenues to increase the GDP. This in short, is what Pritish Chatterjee and Atul Save have achieved.

Savera Engineering founded by Mr Pritish Chatterjee and Mr Atul Save (Cabinet Minister Housing and OBC, Government of Maharashtra), started in 1992 with manufacturing of parts for Videocon and Bajaj Auto. They then expanded their units in Ranjangaon, Pune for LG, Godrej, IFB and Haier. The next big step was venturing into the exports market, manufacturing parts for refrigerator, dishwasher and washing machines for the global mega corporations - General Electric (GE) and Electrolux USA. It has now expanded to grow into a big enterprise with 4 more units and 5 subunits.

Mr Pritish Chatterjee and Mr Atul Save

Pritish and Save then changed gears to approach the Swedish Giant and Furniture Chain IKEA for manufacturing ironing boards for them. Earning their trust, they attracted the attention of other companies who started noticing the quality of work. They were approached by GIMI (Italy) and other UK and EU based companies as well. This was a complete line change and ushered in a new area of work for the company.

Over the last 15 years, Savera Engineering has emerged as the largest manufacturer of ironing boards in the world, beating China by a large margin to export their products to over 42 countries. They have gained a competitive edge in the export market, by incorporating forward and backward integration in their operations, manufacturing everything needed in the end product, in-house.

Savera Engineering is also the largest exporter in the metal and plastic category for IKEA from India. Incidentally, there are times when their products are actually sent to China whereas, in most cases it is the other way round. They are also one of the top 10 exporters for IKEA from South East Asia.

A first generation entrepreneur, Pritish has successfully built a business across 31 years that now employs over 2500 people. A mechanical engineer and MBA by qualification, he has been instrumental in getting on board some of the top notch names like Tesco, Sainsbury, GIMI and Decathlon. Traveling extensively and showcasing India to the world, he has truly been the ambassador for the "Make In India" concept.

Savera Engineering was recently awarded by the United Nations as an SME Champion for their work in

the field of women empowerment as their factories employ over 65% women workforce. This initiative was started by Pritish 9 years ago, and is now successfully in place

Savera Engineering has also been awarded as a top exporter in their category by EEPC (Engineering Export Promotion Council) India for seven years in a row.

In 2023, Pritish was awarded as one of the "Influential Leaders of India" that celebrated excellence and honoured visionary trailblazers in their respective fields.

For a decade, Pritish has been gradually training and inducting the second generation into the business, creating a smooth path for a successful future and succession at Savera Engineering.

May the sun shine eternally on this empire.
