

These ambitious targets align with the escalating demand for iron ore in the Indian steel sector, ensuring our capability to stay ahead of the domestic needs.

Channeling this roadmap, NMDC established a Works Organisation to streamline execution, closely monitor, and adhere to timelines in our capacity building initiatives. This has led to a clear segregation of production operations and capacity building operations, identifying responsibility centers to secure milestones mapped to timelines. On the back of the best ever CAPEX in company history in FY23, our smartest move is to invest prudently. NMDC's chartbusting performance is an outcome of its consistent investment in enhancing its technical and digital strength, building up its production and evacuation infrastructure, and nurturing its commitment to Responsible Mining.

Q Could you elaborate on the digital journey and maturity of the organization, which defines its capabilities and accruing advantages?

The emergence of digital technology has significantly transformed the accessibility and data available to mining companies, paving the way for evolved operations. NMDC is using state-of-the-art technology to enhance operational efficiency, sustainability, and safety in line with the vision of a digitally empowered mining company. Key to achieving this vision are digital initiatives such as

edge computing, mining drones, and predictive real-time analysis. These advancements in the digital journey of NMDC are streamlining our business process and delivering milestone production and productivity.

NMDC has been an early adopter of automation and digitalization. We are consistently investing capital in building smart and sustainable mines. Some recent technological interventions that are optimizing processes, minimizing waste, and enhancing our capacities are Drone Based Exploration, Fleet Management System, Automatic Sample Collection System, Rapid Wagon Loading System, and automated capturing of production and despatch information in real time.

NMDC was the first CPSE in the country to implement SAP S4 HANA and today it is serving our entire value chain and giving us complete visibility from Pit to Port, while being a beacon project for the industry.

Q Exploration and mining happens in isolated and virgin geographies, so how is NMDC ensuring that its activities do not damage the fragile bio-diversity?

We mine in ecologically sensitive areas and recognize that mining operations have a substantial impact on the biodiversity of the region. Proactively creating Green Belts with large scale afforestation initiatives around our mines, we are committed to preserve biodiversity and generate carbon offsets, in an effort to address the disturbance to the ecosystem.

To uphold this commitment, we have developed an all-encompassing Biodiversity Conservation Plan. The plan has been meticulously designed, considering the guidelines and regulations set forth by the MoEFCC and forest departments of Chhattisgarh and Karnataka.

For our responsible mine and resource planning, all NMDC mining complexes have earned 5 Star Ratings from the Indian Bureau of Mines, Government of India. Towards building a green and sustainable future, we are leading the way to carbon-neutrality and environmental stewardship. At NMDC, we constantly reinvent ourselves and as our cutting edge technology augments our iron ore production capacity, it also builds an environment friendly and energy efficient infrastructure for us to grow.

Q NMDC has joint ventures in foreign countries in mining minerals. Please elaborate further on these joint ventures?

Towards our vision of becoming a global mining company, we are committed to expand both our mineral assets and geographic reach. In a landmark move, NMDC recently commenced gold mining at Mount Celia in Western Australia. While ventures such as the joint agreement to tap into magnetite reserves at Mount Beven and exploration endeavors for minerals of strategic interest in Australia signal the fillip to diversification and global growth. We are actively exploring opportunities worldwide,
