

behind organising such visits is to inspire the young minds to develop an interest in all sorts of enterprises and to encourage them to work towards fulfilling their dreams, like Mr Adani. The Foundation believes that when youngsters are given exposure, it helps them to understand their own potential and get motivated to work towards the same.

The exposure visits are designed in such a way that they motivate the young ones to think and analyse possibilities beyond the four walls of their classrooms. Learning outside the classroom gives young students a very different and unique perspective. When young minds think big to become the innovators and achievers of tomorrow, it will be a major step forward in the path of nation-building.

These visits give students a chance to visit facilities such as Adani Port, Adani Power, Adani Wilmar refinery, Adani Wind, Adani Solar, the airport at Mundra (Gujarat), Hazira (Gujarat), SVPI airport in Ahmedabad (Gujarat), Kawai (Rajasthan), Dahanu and Tiroda (Maharashtra), Dhamra (Odisha), Krishnapatnam (Andhra Pradesh) and Kattupalli (Tamil Nadu) to get an insight into the largescale business operations and thus get inspired.

A virtual reality (VR) lab installed at the Shantivihar Guest House in Mundra enables students to understand the widespread scale of various business verticals of the Adani Group. It is an amazing experience for the students, who get to see the rapidly growing and humongous business facilities of the Group.

Under Project Udaan, the Adani Foundation organises tours from two locations: a two-day educational trip from Ahmedabad to Adani Ports, Adani Power and the Adani Wilmar refinery at Mundra and a one-day educational trip from Surat to the Adani Port at Hazira. So far, a total of 6,851 visits have been conducted from 2010 to 2023 across all locations in India, and over 4.37 lakh students have visited Adani Group facilities till December 2023. Project Udaan services, which provide students with working insights into largescale business operations and serve to inspire them, were shut from April 2020 to May 2022 due to the shutdowns imposed as a result of the spread of the COVID-19 pandemic.

The services under Udaan are offered free of cost to all government schools while other educational institutions pay only nominal charges. In 2022, the Adani Foundation signed a memorandum of understanding with the Government of Gujarat to expand the reach of the project.

The expansion of Project Udaan in schools and colleges of Gujarat is a holistic step to enhance the

learning curve for students. Such industrial exposure tours encourage their professional and entrepreneurial aspirations. Udaan is a learning-based initiative focusing on the United Nations' fourth Sustainable Development Goal – Quality Education.
