

their friends or with the world. But now that people all over the world have tried social media, they want something different and it's a really good time for Snapchat to show people that there's a better way to communicate with friends and family without all that pressure.

Q: Given the geopolitical tensions globally, there is likely to be pressure on advertising budgets. Does that mean you might need to look at your business model differently?

A: The most important thing to our business is serving our community. As long as that grows, we think we can build a very big business over time. We just passed 400 million daily active users around the world and there is engagement in content and augmented reality and with our app. That gives me a lot of confidence in our ability to continue to grow revenue and develop our business over time. But as you pointed out, it's going to be increasingly important for our business to deliver results with our performance advertising platform, since we need to attract advertisers' spends. Now we have a product that can perform for advertisers and it helps us to weather some of the volatility and the challenges since we can drive measurable results in a scaleable way for advertisers.

Q: Do you think there is inherently some conflict between minimising data collection and yet having a play in performance advertising?

A: There is some tension there but that's also where the innovation lies. And that, to me, is what's so exciting that we don't need to trade off privacy for great business performance. We can innovate and come up with new ways to help advertisers reach the customers, without sacrificing the privacy of the people that use our service. As we've worked on things like aggregated data and ML modelling, we've been able to find ways to help advertisers who have achieved their performance goals without leaking privacy-safe information from our community.

Take the case of AR for advertisers. That's another big opportunity for us, especially because so many people love using our camera to share and express themselves with brands. Plus, brands find that when people engage with their AR tools, and they share the AR effects with their friends, that can help drive business results for them as well.

Q: You are on a growth trajectory globally but
