Beautiful Outside, Powerful Inside

The new iMac perfectly captures the essence of an all-in-one desktop's look and performance. Available in vibrant coloured aluminium frames with matching accessories, this new device from Apple comes in a sleek package. Weighing just below 5 kg, it's super convenient to move around. And while I was able to tilt the screen easily, its light weight and slender frame makes you extra careful around it. The long

► **APPLE M3 CHIP; 8-CORE CPU; 8- OR 10-CORE GPU; 8GB TO 24GB UNIFIED MEMORY; 256GB TO 2TB STORAGE; 4.5K RETINA DISPLAY**

braided magnetic easy-to-plug-in power cord, accompanied with the wireless keyboard and mouse, complete the package.

In terms of performance, the 24-inch 4.5K Retina display with a resolution of 4,480x2,520 pixels offers 500 nits brightness, and delivers sharp visuals. But there's also visible glare on the screen at times. The sleek 11.5 mm body packs in a punch with Apple's latest

M3 chip, making it ideal for home use, small business needs, or even heavy graphic workloads, with higher configuration machines. The review unit, with a 10-core GPU, had enough juice to edit high-res photos or multiple streams of 4K videos. Completing the setup is a 1080p FaceTime HD camera and microphones tuned to reduce background noise. The six-speaker sound system, along with faster frame rates, offers an amazing gaming experience. Plus, continuity between Apple devices works brilliantly, too. The rear houses two Thunderbolt and two USB 3.0 ports that are also blazing fast. So if you're looking for a new all-in-one, the new iMac is your best bet.
