

Empowering Inclusivity

The Transformative Power of Assistive technologies

HITACHI
Inspire the Next

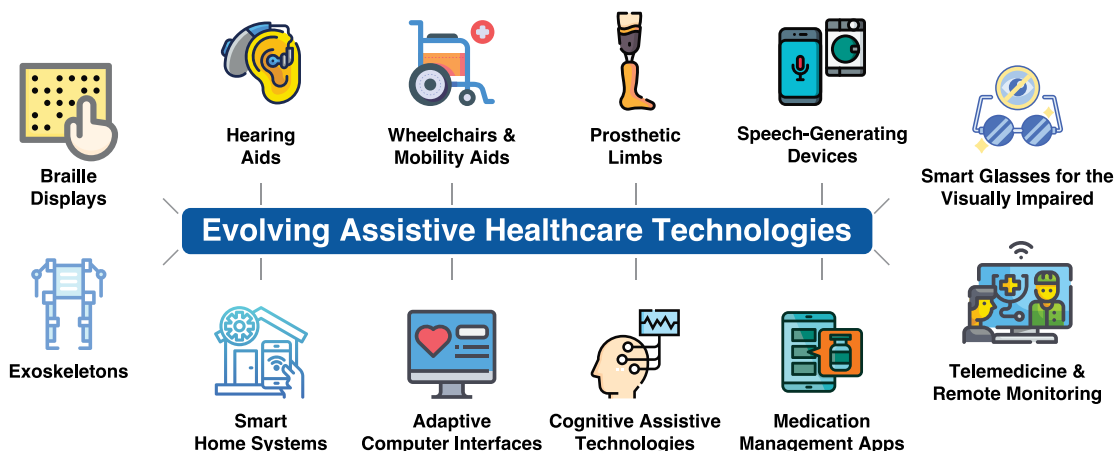

Imagine the joy that lights up a mother's face as her child hears his very first words, thanks to the magic of cochlear ear implants. Envision the profound relief coursing through parents as they witness their nonverbal autistic child, now able to communicate with teachers and peers through a speech-generating device.

Persons with disability, once reliant on caregivers for the most basic tasks, now stand tall as they conquer these tasks independently. This is the immense power of technology, particularly Assistive Technologies—those incredible innovations that encompass devices, software, and equipment designed to empower people, enabling them to surmount challenges previously deemed insurmountable.

These technologies have the remarkable ability to unlock a world of opportunities for individuals with disabilities, the elderly, those living with non-communicable diseases such as diabetes and stroke, people struggling with mental health conditions like dementia and autism, and those experiencing gradual functional decline.

At GlobalLogic, a Hitachi Group Company, technology is embedded deep in their DNA, and it continues to fuel their unrelenting passion for digital innovation. By harnessing the boundless potential of technologies, it is committed towards empowering the marginalized, affording them the chance to lead healthy, productive, independent, and dignified lives.

In a world intertwined by technology, we still witness the shadows of stigma against the differently-abled. However, technology carries the torch of hope—it has the prowess to mold a society that truly embraces inclusivity, altering perceptions and redefining 'normal.'

A 2022 report by WHO-UNICEF unveiled a staggering statistic—access to assistive technology is as low as 3 percent¹ in low and middle-income countries. To address the needs of disabled individuals, it is imperative that we transform India into a hub for the manufacturing of assistive devices. We must foster an ecosystem where accessibility and affordability are at the forefront. GlobalLogic stands ready to

collaborate with stakeholders, be it governments, research bodies, or start-ups, to help India emerge as a global centre for assistive devices, ensuring no one is left behind.

With a shared vision to leverage technology for the greater good, GlobalLogic is working tirelessly to build an inclusive and equitable healthcare infrastructure that ensures quality medical care reaches even the remotest corners of India, shaping a more inclusive future for all.
