

embrace Generative AI to propel economic growth and societal progress. The emphasis lies on critical sectors like healthcare, agriculture, education, and mobility and underscores our ambition to deploy AI solutions tailored to the distinctive needs of our 1.4 billion citizens. The two-tiered research structure, comprising Centres of Research Excellence (CORE) and International Centres for Transformational AI (ICTAI), aims to position India as a global AI innovator. Simultaneously, our commitment to workforce skilling and reskilling ensures that our labour force remains adept in the face of AI-driven transformations.

The endorsement of a marketplace model, exemplified by the National AI Marketplace (NAIM), reflects our pursuit of an ecosystem that accelerates collaboration, innovation, and the practical deployment of AI solutions. Additionally, our commitment to ethical and responsible AI development is complemented by the establishment of the Centre for Studies on Technological Sustainability (CSTS).

Vision 2029 positions India not merely as a participant but as an architect in the evolving tech frontier. Through shaping the global technological landscape, we aim to contribute to the greater good, societal advancement, and sustained competitiveness.

Manufacturing Hub

India stands at a pivotal juncture to establish itself as the global manufacturing hub amid the shifting dynamics of global supply chains away from China. The Make in India initiative, aimed at drawing global manufacturers, has successfully positioned the country as a leading smartphone manufacturer. From 2014 to 2022,

India shipped 2 billion domestically assembled smartphones, per Counterpoint Research, with 98% produced domestically in 2022, and 16% exported.

Supporting manufacturing, the production-linked incentive (PLI) scheme, particularly effective in the smartphone sector, is anticipated to drive exports beyond ₹1.2 lakh crore in the current fiscal. Infrastructure development is a priority, with substantial investments enhancing roads and transportation.

The National Single Window System streamlines processes for foreign traders, facilitating business in India. The nation is intensifying its focus on research and develop-

ment of private entities. Initiatives such as IN-SPaCE and regulatory relaxations are fostering a favourable environment for private sector participation. With an ambitious goal of reaching \$12.8 billion in the global space market by 2025, India aligns with the projected doubling of the global space launch services market to \$31.9 billion by 2029. Chandrayaan-3's lunar exploration not only positions India but also opens avenues for space-based manufacturing and economic transformation. International collaborations, including OneWeb and the Artemis Accord with Nasa, showcase India's global space capabilities.

INDIA'S FOCUSSED POLICIES POSITION IT AS A RISING GLOBAL MANUFACTURING HUB, RESHAPING THE GLOBAL SUPPLY CHAINS

ment (R&D), emphasising the necessity for increased government-industry partnerships to spur innovation. Taking a protectionist approach, India raised import duties on laptops to incentivise foreign manufacturers to invest in local production.

India's focussed policies and investments position it as a rising global manufacturing hub, reshaping the dynamics of worldwide supply chains.

The Space Frontier

India's space sector is rapidly evolving, marked by the success of Chandrayaan-3 and the growing

Towards Tomorrow

In essence, India 2029 is characterised by a balance between ambition and pragmatism. It's a carefully calibrated road map that acknowledges the global complexities.

As the nation positions itself to be the third-largest economy, it does so with a clear understanding that economic growth isn't an end in itself; it's a means to elevate the lives of its citizens, contribute meaningfully to global progress, and secure a lasting place in the corridors of the global community. **BT**
