

litres of water annually. The water-free robotic cleaning technology has already been adopted across 30% of AGEL's operational solar and hybrid plants – 2,070 MW of 7,043 MW capacity. This cleaning method will save about 283 million litres of water annually (equivalent to water requirement of about 2.7 million households every year).

The robots use a water-free technology that is both environmentally friendly and enhances the energy output of solar panels. They enable a faster cleaning cycle and reduce overall operation and maintenance costs.

Keeping in mind the growing concerns around scarcity of freshwater resources, AGEL has been undertaking several water stewardship activities, aligned with the UN sustainable development goals (SDG) 6 on sustainable management of water. (Goal 6: Ensure access to water and sanitation for all).

In FY23, AGEL achieved water positive certification (for plants of more than 200 MW) from DNV, an independent global assurance agency. In the coming years, the company will be investing further in advanced technology to minimise water consumption. AGEL's integration of technology with environmental stewardship ensures that the operations are green.

Currently, AGEL has an operating renewable portfolio of 8.4 GW – the largest in India – spread across 12 states and offsetting more than 41 million tonnes of CO₂ emissions cumulatively. AGEL has set a target of 45 GW by 2030 – in line with India's decarbonisation goals.

Apart from being certified "water positive for plants of more than 200 MW capacity", AGEL's operating portfolio is also certified "single-use plastic free" and

"zero waste-to-landfill".

In India, the thrust on research and innovation in the renewables sector has been instrumental in creating a robust ecosystem that supports the growth of locally manufactured green energy. As the country strives to achieve its renewable energy goals, there is a vast scope for expansion and technological innovation that is likely to further propel the growth of this industry in a sustainable manner.
