Some of these such as food subsidy or employment guarantee can be recurring expenditure, while others such as those on providing laptops and phones can lead to a one-time spike in expenditure. "It is important to note that some subsidies such as those on electricity and water can free up spending in households that can then be used for consumption and lead to higher revenue for the government as well," he says.

Mukherjee's recent analysis has found that the 18 major and nine minor states faced fiscal stress in the Revised Estimates of 2022-23. "Given the experience of revenue mobilisation and expenditure manage-

ment in 2022-23, states [should] adopt a cautious approach in setting the Budget Estimates for 2023-24," says his paper called State Budget Analysis of 2023-24: State of Indian State Finances.

The PRS report also highlights that several states continue to budget revenue deficit, thus constraining capital outlay. The outstanding liabilities or accumulated debt of states has also risen again in recent years, partly due to expenditure, such as farm loan waivers and debt takeover from the UDAY scheme. In 2020-21, states' fiscal deficit limit was increased to 5 per cent of GDP due to the adverse impact on revenue receipts
