

USER CLUB

► **BOAT** IT OPTED FOR SAP S/4 HANA FOR ERP (ENTERPRISE RESOURCE PLANNING) AND SPRINKLR FOR CUSTOMER SERVICE

► **PAYNEXT** IT MIGRATED ITS WORKLOAD TO ORACLE CLOUD INFRASTRUCTURE, RESULTING IN EASE OF ACCESSING DATA AND SAVING EXPENDITURE OF OVER 50 PER CENT

► **WAYCOOL FOODS** IT OPTED FOR SAP'S ERP SOLUTION AND BUILT AN IN-HOUSE LAYER ON TOP OF IT, WHICH HELPED IT REGISTER 8X GROWTH SINCE IMPLEMENTING IT IN APRIL 2021

SOLUTIONS OFFERED

► **GROW WITH SAP** A MORE PALATABLE, FINE-TUNED COMMERCIAL MODEL THAT GIVES START-UPS THE FLEXIBILITY TO CHOOSE THE FEATURES AND FUNCTIONALITIES THEY NEED

► **ORACLE CLOUD INFRASTRUCTURE FOR DIGITAL NATIVES** IT OFFERS A FULLY MANAGED CLOUD NATIVE PLATFORM FEATURING CONTAINERS AND KUBERNETES, AMONG OTHER FUNCTIONS, A FULL SUITE OF APIS AND STREAMING SERVICES, PRE-TRAINED AI & ML, AND DATABASE SERVICES, A COMPREHENSIVE LOW-CODE APPLICATION DEVELOPMENT PORTFOLIO AND NETSUITE ERP

► **YOTTA SUPERCOMPUTER** BUILDING INDIA'S LARGEST SUPERCOMPUTER WITH NVIDIA'S LATEST H100 TENSOR CHIPS, WHICH CAN HELP START-UPS WORK ON AI

term gains in operational efficiency, fewer manual errors, and optimised use of resources.

PayNext, which offers end-to-end digital and automated payment solutions to banks such as RBL Bank, YES Bank, Federal Bank, and South Indian Bank, and payment acceptance solutions for businesses with PoS, QR-code, scan and pay, etc., had hosted its digital transaction business application on other hyperscalers. But when it diversified its digital services, the setup became too costly and complex to manage. By migrating the workload to Oracle Cloud Infrastructure, PayNext increased application performance, availability, and scalability. "We were afraid of Oracle being a big brand name. We were not sure at what price they would come to us. But they understood the challenges of a fintech company and addressed the cost for us," says MD Maulik Joshi.

Shabeer K Mohamed, senior sales director at Oracle, says, "Unlike other digital natives or start-ups, most of them are pressed for time because you have an idea—you want to get that into the market, you need to get that onto your customers, whether it's B2B or B2C in the fastest possible time." Oracle has a dedicated framework or offering designed to give these digital natives and startups the capability to scale their offerings quickly, he says.

For start-ups, IT is mission-critical, requiring robust protection against cybersecurity threats that continue to evolve and adapt. And as organisations embrace digital initiatives, the exposure of applications to potential threats increases. "The expanding security perimeter, driven by the growing volume of data, devices, users, and applications, intensifies the challenge. Simultaneously, the scarcity of required security, risk, and compliance skills adds to the complexity faced by IT teams, consuming valuable work hours," says Bhawna Agarwal, Senior Director - Compute and Digital Sales, HPE India.

To address these challenges, startups are turning to managed services such as HPE Services, which allow them to offload the day-to-day burden of security management. boAt's Mehta, who has grown a start-up into a unicorn, says, "Any company that wants to grow has no option but to have technology. Whether it be on product, marketing, or back end, otherwise, your manpower costs will grow, and systems will not work, so without technology, nothing will work."

Should you, as a start-up looking to scale, build in-house solutions or go for experts offering solutions? Ask ChatGPT. Or just do what boAt did. **BT**
