

► **STIGMA AND FEAR** are the two terrible by-products of skin diseases. For Parul Ganju, 38, and Krishnamurthy Natarajan, 63, this was more than enough reason to leverage their scientific understanding (both were academics) and couple it with an entrepreneurial spirit. And this was how Ahammune Biosciences was formed in May 2016 in Pune. The research firm's primary aim is to provide comprehensive treatment solutions for various skin diseases, in particular vitiligo, a depigmenting disease with elusive mechanisms.

Ahammune focusses on rigorous testing to identify

• **PARUL GANJU**, CO-FOUNDER & CEO
• **KRISHNAMURTHY NATARAJAN**, CO-FOUNDER AND NON-EXECUTIVE DIRECTOR

> **KEY INVESTORS** Ideaspring Capital, IAN, Kotak Private Equity and Baldota Family Office

> **FUNDING** It has raised \$3 million till date

> **WHAT MAKES IT COOL** This lifesciences company is fostering innovation and unorthodox thinking to find novel treatments for longstanding skin problems

a revolutionary treatment for vitiligo. Its proprietary treatment, distinguished by a "first-in-class" mechanism of action, not only halts the disease's progression but also promises the complete restoration of skin patches. Ahammune's treatment process is non-steroidal and non-immunosuppressive in nature, ensuring safety and efficacy. The founders believe, this treatment will provide new hope for millions of patients, transforming the vitiligo therapeutics arena. **BT**

► **Robotics can be an exciting field. But India's prowess in this area is still to match up to countries like Japan, South Korea, China and others. Trying to change this, back in 2020, during the peak of the Covid-19 pandemic, a bunch of young minds, hailing from diverse backgrounds, started ANSCER Robotics, with the aim of developing indigenous methods to build and manufacture high-quality mobile robotic platforms. According to Raghu V., the Co-founder and Business Head, the company has signed MoUs with conglomerates like the Aditya Birla Group and has a growth outlook that covers North America, Europe, Asia Pacific, Middle East and Africa, along with India. "In just 36 months, we've evolved from a mere idea to achieving product-market fit, deploying over 20 robots across India and North America. Our global footprint is expanding rapidly too," the Co-founder asserts. What sets ANSCER Robotics—that had revenue of 2.15 crore in FY23—apart is the fact that it uses advanced AI technology, possesses a user-friendly interface and is a unique combination of advanced technology, customisation, safety, and cost-effectiveness. **BT****
