

VIDEOVERSE (AI-BASED VIDEO EDITING)

• VINAYAK SHRIVASTAV,
CO-FOUNDER AND CEO

► **KEY INVESTORS** Evolve India, Binny Bansal, Bluestone Equity Partners and SOSV

► **FUNDING** It has raised total funding of \$61.9 million

► **In the ever-expanding landscape of video creation and consumption, VideoVerse is a trailblazer. Founded in 2016 by Vinayak Shrivastav, Sanket Dandotia and Alok Patil (Dandotia and Patil have moved on since), VideoVerse—with annual revenues of ₹5.9 crore as of March 31, 2022, per Tracxn—has been at the forefront of transforming the video editing processes through Magnifi, its flagship platform. “Magnifi is an AI-powered platform that addresses the challenges faced by content creators in identifying and curating key moments in videos. We envisioned it as an interactive video shopping platform that works with top-tier sports leagues and content producers globally,” Shrivastav says. Its clients include UEFA Champions League, Wimbledon, NCAA Basketball, and Indian Premier League, among others. BT**

VIRTUAL FOREST (CONSUMER PRODUCTS)

(CLOCKWISE FROM LEFT)

• RAVI SAJJAN, HEAD OF ENGG.-HW • NAZIR TOLAGI, CTO
• OMER BASITH, CEO • GAJANANA PALKAR, HEAD OF ENGG.-SW

► **KEY INVESTORS** Napino Auto and Electronics participated in its seed round, and continues to be a strategic manufacturing partner

► **FUNDING** It raised its seed round in August 2020, and hopes to complete its Series A in Q4FY24

► **VIRTUAL FOREST**, founded in 2019 by Omer Basith—an intrepid entrepreneur passionate about green energy and carbon reduction—focusses on developing energy-efficient motor control and human interface technologies for home appliances, aiming to reduce their environmental impact. The company raised its seed round in August 2020, with key investor Napino Auto and Electronics remaining a strategic manufacturing partner. Despite the presence

of Electronic Manufacturing Services (EMS) firms and electronic component suppliers in India, the motor control solutions market relies heavily on imports due to the absence of a local player with deep domain expertise. Virtual Forest fills this lacuna. It offers local R&D, testing, integration and bulk manufacturing with end-to-end project management support. Virtual Forest—which posted revenue of ₹10.93 crore in FY23, per the company—also plans to expand into refrigeration and electric vehicle controllers.

The company's outlook for FY25 includes expanding market share, entering new applications, and addressing the gap in R&D. Within a short period, it has served top-tier brands, built partnerships with leading EMS firms and global component suppliers, and anticipates continued growth. **BT**
