➤ **FUNDING** The company has raised more than \$500 million in equity till date

➤ **WHAT MAKES IT COOL** It is a category creator and the only digital manufacturing unicorn in the world

► **ESTABLISHED IN** 2018 by Amrit Acharya, Srinath Ramakkrushnan, Vishal Chaudhary, Rahul Sharma, and Ankit Fatehpuria, Zetwerk was born out of a need for a managed B2B manufacturing marketplace that would enhance transparency. It operates as a business-to-business contract manufacturer with capabilities ranging from precision machining and die casting to 3D printing and apparel production.

It secured seed funding of \$1.5 million from Kae and Sequoia. The company's initial focus was on producing parts crucial for establishing factories. Interestingly, Zetwerk's products found their way into diverse project initiatives undertaken by different stakeholders and it has emerged as a trusted partner for big names such as Tata Steel, ArcelorMittal and L&T, among others. Zetwerk had operating revenues of ₹11,449 crore in FY23, with Ebitda (earnings before interest, tax, depreciation and

amortisation) of ₹66.2 crore.

The first major breakthrough came in September 2019 when Zetwerk went global, to serve customers in the US, Mexico and the Middle-East. While originally, the start-up was focussed on the General Fabrication business vertical, Zetwerk later diversified into various sectors, like consumer electronics, aerospace and defence, oil and gas, renewables and precision engineering. In the consumer electronics space, Zetwerk has secured partnerships with leading players in the wearables-hearables domain, fueling the company's expansion.

As of today, Zetwerk operates within two distinct business domains—industrial manufacturing and consumer business which collaborates with notable brands to manufacture products within India, embodying the 'Make in India' initiative. **BT**
