

“Technology often moves faster than industry adoption. We prepare our students to become business leaders who lead the industry in technology adoption and drive change. We have introduced courses like AI in human resources”

being prepared to absorb all that information and be ready for the future business environment. Sometimes industry leads us; sometimes we lead industry by preparing students who will take new technologies into organisations.

Q: Overall, is Indian management education well-positioned for the transition that is underway?

A: There are layers in the system. The top institutes are preparing well and transforming quickly. Others are lagging and would take longer to adapt. We are well-positioned, but the transition must include the entire ecosystem. Top institutes must help bring others along so the broader economy benefits, not only high-end industry.
