Debt: Short Duration	Funds with Macaulay duration between one and three years at the portfolio level
Debt: Liquid	Funds investing in debt and money-market securities with maturity of up to 91 days

stocks, which is usually the case in growth style of investing. The reverse is often true for value style.

Portfolio P/B Ratio: Average of the price-to-book ratios of the underlying stock holdings in proportion to their portfolio weights. A high P/B ratio indicates that the fund has invested predominantly in richly valued stocks, which is usually the case in growth style of investing. The reverse is often true for value style.

Macaulay Duration: Weighted average time to receive the fund's cash flows, considering both interest payments and principal repayments across all the bonds in the portfolio. It's expressed in years and reflects the

overall sensitivity of the fund's value to interest rate changes. The higher the duration, the more sensitive the fund is to interest rate fluctuations.

YTM: Return the fund is expected to generate if the underlying bonds are held until maturity. It may change as the fund manager buys and sells bonds in the portfolio.

Tracking Error: Measures how closely a fund's performance matches its benchmark index. It quantifies the difference between the fund's returns and the benchmark's returns over a period of time. A low tracking error means the fund is closely following the benchmark, while a high tracking error indicates more deviation. **BT**
