THE NEXT LEAP BEYOND AI

Kris Gopalakrishnan, Chairman, Axilor Ventures & Co-Founder, Infosys, explored how AI is disrupting India's \$250+ billion IT services industry at a fireside chat

» Drawing parallels to the computer revolution six decades ago, Gopalakrishnan said AI is a seismic shift that will redefine industries, economies, and individual work patterns

» AI will create new opportunities for innovation, efficiency, and growth. However, this transformation demands large-scale reskilling; an estimated 5.5 million IT professionals must be retrained to stay relevant

» Relying on foreign technology and capital at scale is unsustainable, especially given AI's multi-billion-dollar investments globally. Gopalakrishnan called for India to build infrastructure like data centres and GPU clusters domestically

» He sees immense potential for new AI-driven products from India
