

## POWERING INDIA'S AI REVOLUTION

(From left) **Aabha Bakaya**, Senior Anchor, Business Today; **Krishna Gopalan**, Executive Editor, Business Today; **Keshav Reddy**, Founder, Equal AI; **Ganesh Gopalan**, Co-Founder and CEO, Gnani.ai; **Jaspreet Bindra**, Founder, AI&Beyond and Tech Whisperer Ltd; **Sehaj Virk**, Head of Strategy and GTM, Model API, Sarvam AI

» Reddy spoke about the AI call assistant his company is building to answer unknown phone calls and how it has gone viral on social media with 10,000 downloads and 100 million views on the launch video. "It's super exciting to build something ground up, native AI, for India, and I think that's what we're building here. It's just the beginning. India is a scale market. You just have to go large in scale," he said

» Ganesh highlighted that Indian corporates are at the forefront of AI adoption and, going forward, there

will be a lot of adoption of AI by the government as well. "India is the place where a lot of innovation is happening, especially in terms of using AI to solve problems... It's no surprise that a lot of global entities which never looked at us are looking to set up offices in India, and starting to even hire in India, like solution experts," he said.

» Bindra highlighted that the number one biggest funding gap in India for AI is funding research. "We do not have any fundamental research worth its name happening in AI across

## HARNESSING AI IN HEALTHCARE

(From left) **Karishma Asoodani**, Senior Correspondent, BT; **Viren Prasad Shetty**, Executive Vice Chairman of Narayana Health; **Dr Geetha Manjunath**, Founder and CEO of NIRAMAI; **Dilip Jose**, Managing Director and CEO of Manipal Hospitals

» Shetty said AI is already transforming routine hospital operations by automating repetitive, manual tasks and freeing up medical staff to focus on patient care. "The biggest constraint in healthcare is the huge reliance on manpower, as a lot of activity is manual and paper-intensive. AI helps eliminate repetitive, non-essential tasks and allows doctors and nurses to focus on patients," Shetty said

» Manjunath highlighted how AI-based screening can save lives through early detection of breast

cancer. "Around 2,000 women die every day globally from breast cancer. It is completely curable if detected early, but people do not come on time," she said

» Jose said the bigger opportunity lies in prevention and wellness. "India needs 23 lakh more hospital beds, but the money is not there. The real opportunity for AI is in prevention, early detection, awareness and cost reduction," he said. Both hospital leaders pointed to the emergence of 5G-enabled ambulances that transmit patient data in real time to hospitals
