“Three major therapy areas will drive growth: oncology; biopharmaceuticals covering cardiovascular, renal, respiratory, and vaccines; and rare diseases, where we are investing for the long term. These three pillars will define our growth path over the next few years”

A: Our vision is to cure cancer and eliminate it as a cause of death. We are deeply committed because there is tremendous innovation happening in oncology. For example, in immuno-oncology—where the power of the body’s immune system is harnessed to fight cancer—we already have a strong presence. We expect further innovation in this field.

India has significant disease prevalence across major cancers such as lung, breast, and gastrointestinal.

Another exciting area of innovation is antibody-drug conjugates. We have launched one in the context of breast cancer, which remains a huge unmet need in India, and we intend to bring more of these conjugates to address key cancers.

Q: How is the pharma industry responding
