YOTTA / (HIRANANDANI GROUP)

► Plans to have an 800-1000 MW (megawatt) data centre capacity in India and overseas by 2030. Capital investment in projects is around ₹50 crore per MW

SOURCE COMPANIES, JM FINANCIAL

GCCs cut across sectors. Sankarshana says her company (Planview has been in India for three years) works with companies in oil and gas, manufacturing, and life sciences, among others. "Our core is business transformation, of which digital, including AI, is a huge chunk," she says. Around 40% of Planview's staff strength of 2,000 sits in India, with a clientele that includes Schneider Electric, BT, FedEx and TVS Motor Company. "India has an interesting role in the GCC story, and from our point of view, it brings both scale and speed to the table." For global companies, GCCs are a way to directly access the offshore labour pool, as opposed to

going through one of the IT or consulting majors.

This significant insourcing trend does open an opportunity for all, but not necessarily at ticket values that come with large contracts. Effectively, the overall market share pie will start to look different as more players get smaller chunks, say IT sector experts.

In the process, what one can do with AI will make a difference. "Using AI, the pharmaceutical industry achieved a 15% drop in costs, something that technology could not have done. The time taken to launch a new drug has also dropped," says Avinash Vashistha, Chairman & CEO, Tholons, which enables other companies to
