

ADANI LOGISTICS PARK

GROUNDBREAKING CEREMONY

ADANI GROUP'S KOCHI LOGISTICS PARK AIMS TO BUILD INDIA'S GREEN FREIGHT FUTURE

With a ₹600-crore investment, the diversified conglomerate's upcoming multimodal logistics park in Kochi is more than an infrastructure project — it's a bold experiment in climate-tech, automation and Kerala's economic transformation. As India races toward its 2070 net-zero goal, this 70-acre facility could redefine how the nation moves goods, cuts emissions and powers inclusive growth

When Prime Minister Narendra Modi announced India's net-zero target for 2070, freight transport quietly emerged as one of the hardest challenges to crack. Road transport — dominated by diesel trucks — accounts for nearly 90 per cent of freight-related emissions. Left unchecked, it could derail both India's climate ambitions and its competitiveness, with logistics costs hovering around 14 per cent of GDP (Gross Domestic Product), nearly double that of developed economies.

Against this backdrop, the Adani Group's new Multimodal Logistics Park (MMLP) at Kalamassery, Kochi, marks a strategic pivot. Spread over 70 acres and backed by a ₹600-crore investment, the facility aims to reimagine freight as clean, digital and efficient. The ground-breaking ceremony, held on August 23, saw Kerala Chief Minister Pinarayi Vijayan lay the foundation stone — signalling both industrial intent and political confidence in private investment.

Decarbonisation Meets Design

Located near Vallarpadam's International Container Transshipment Terminal (ICTT), the Kochi park is seamlessly aligned with the Sagarmala and PM Gati Shakti programmes — two national initiatives designed to integrate India's fragmented freight corridors. But what sets it apart is its emphasis on decarbonisation.

The facility will feature EV (electric vehicle) charging bays and solar rooftops, supporting electrified fleets, while green hydrogen fuel cell trials are under consideration. By shifting cargo from road to rail and inland waterways, it promises both lower costs and reduced carbon emissions. Currently, India's freight share stands at 65 per cent by road, 27 per cent by rail, 5 per cent by waterways and 3 per cent by air. The government plans to drastically cut road dependency by 2030. Once Kochi succeeds, it could become the national prototype for sustainable multimodal hubs — soon mirrored in cities like Nagpur, Bengaluru and Guwahati.
