

developing country, infrastructure demand was both urgent and rapidly evolving.

Janmejaya Sinha, Chairman (Asia-Pacific), BCG, says creation of infrastructure led to a continued growth momentum in India and, more importantly, enhanced India's contribution to the global gross domestic product (GDP). "From just 1-1.5%, it is at a much healthier 3.5% today and (would be) over 6% by 2030."

Specifically, for Indian MNCs, one big opportunity is the German Mittelstand (small and medium family-owned enterprises), says Sinha. "These businesses have leading market positions in a segment or high talent density, but the owners are aging, with

their children often not interested in running the business. They could be good partnering or buying opportunities."

BUILDING AN IDENTITY

The Mahindra Group's global journey began with "four wheels and a bold idea." It goes back over 70 years when Mahindra assembled the Willys Jeep. "That single product would go on to define rural transportation in India and become a symbol of rugged, reliable power," Anish Shah, Group CEO & MD, says. It made the group ambitious to not just serve the domestic market but, as he puts it, "make India matter on the world stage."
