Sun Pharma	34,666	67
Lupin	14,203	63
Divi's Labs	8,091	88
PI Industries	6,546	82
Syngene International	3,503	96
Tata Elxsi	2,920	78
Indegene	2,767	97
Crisil*	2,273	70
Usha Martin	1,893	54

*FOLLOWS JANUARY-DECEMBER AS ITS FINANCIAL YEAR; REVENUE FROM OVERSEAS MARKET IN ₹CRORE; DATA BASED ON FY25 RESULTS; **SOURCE** ANNUAL REPORTS AND ACE EQUITY

beginning of the decade, the stated ambition is to hit \$7 trillion by 2030. “That kind of growth is a rarity except in the case of the US and China,” says BCG’s Sinha. The route to 2030, he says, will be determined by technology or how AI determines productivity, geopolitical tensions, and our ability to deal with a multipolar supply chain.

By 2047, existing industries are expected to get stronger, and the relatively nascent ones are likely to achieve scale. Deloitte’s Shetty is clear that it is only a question of time before defence exports start to take off with greater privatisation. “You only have to see how big defence exports in countries like US, UK, France and Germany are today,” he says. Other emerging areas, in his view, are AI and quantum, both being natural areas of strength for India. “As a country, we have the resilience. All our companies need to understand technology and it is a question of time before brand India gets bigger on the global scale.”

Nothing is complete without a look at the geopolitical scenario. According to Chittoor, the US is still home to the largest number of MNCs because it has created facilitating conditions to get the best of people, technologies and raw materials from anywhere in the world. “As we speak, they are losing out on this advantage due to barriers erected by the Trump administration. India should do the opposite by creating conditions that existed in the US for decades that enabled it to attract the best talent and technologies,” he says. The opportunity is staring us in the face and seldom is it of that magnitude. That moment is now, and India must seize it. Not just for 2047 but many years beyond that as well. **BT**
