

Medikabazaar's Mission to support Make in India is helping Indian OEMS to get access to India and Global market

India's healthcare sector is undergoing a major transformation. With rising government investment, increased private participation, and a surge in digital adoption, the industry is becoming a cornerstone of the country's growth story. At the centre of this evolution is Medikabazaar—a digital-first B2B health-tech platform that's reshaping how healthcare institutions across the country source and manage medical supplies.

At the forefront of this shift is the leadership at Medikabazaar. Under their collective vision & execution, the company has evolved into one of India's largest B2B digital health-tech platforms, serving over 100,000 healthcare institutions and offering more than 2,00,000 SKUs across consumables, pharmaceuticals, equipment, and devices.

India's healthcare market is projected to touch \$638 billion by 2030, growing at a CAGR of 20%. This growth is fuelled by a mix of factors: a rising middle class, increased life expectancy, a growing burden of chronic illnesses, and the rise of medical tourism. Government initiatives like Ayushman Bharat and the National Digital Health Mission are accelerating access and innovation. But even with this momentum, the healthcare supply chain in India has remained fragmented and inefficient—especially in tier 2, 3, and 4 cities.

Medikabazaar is solving this problem with a hybrid approach—combining the power of a digital marketplace with on-ground operational strength. Its AI-enabled platform offers features like predictive procurement, automated reordering, and smart inventory tracking. At the same time, its nationwide network of logistics partners, regional distribution centres, and field sales teams ensures that products are delivered on time and with necessary support. This has allowed even remote healthcare institutions to access quality products efficiently.

One of the most impactful initiatives driven by the leadership is MB+, Medikabazaar's in-house brand built on the principles of Make in India. More than just a label, MB+ is a platform to promote Indian medical manufacturers and reduce dependence on imports. The product portfolio ranges from everyday consumables to complex devices, all produced under strict quality standards. MB+ is enabling Indian innovation to flourish—supporting local manufacturing and aligning with national goals of self-reliance in healthcare.

With MB+, Medikabazaar has not only enhanced affordability & accessibility but also strengthened its own bottom line. By working directly with Indian OEMs, the company has been able to improve margins, drive efficiencies, and move steadily toward profitability.

But the ambition doesn't stop at India's borders. With a presence in Dubai & China, Medikabazaar is actively enabling Indian manufacturers to tap into global markets. Through cross-border e-commerce and international partnerships, MB+ is reaching customers across Southeast Asia,

the Middle East, and Africa—telling a strong India-to-the-world story.

Together, we've built a culture focused on clarity, speed, & scale—anchored in the belief that technology and trust are the twin engines of transformation.

Medikabazaar is also playing an active role in strengthening India's public health infrastructure. Through public-private partnerships, it has become a trusted procurement partner for government bodies, NGOs, & large public programs—especially during national emergencies like the COVID-19 pandemic.

Looking ahead, the focus is on deeper AI integration through Medika Business Solutions (MBS), expansion into high-demand categories like diagnostics, oncology, & critical care, and faster fulfilment through smart warehousing and supply chain innovation. With a ₹2,100 crore run rate and plans to be EBITDA positive in FY25–26, the company is well on its way to becoming a global force in healthcare logistics.

As India steps confidently toward 2047, Medikabazaar is making sure that healthcare is not just catching up—but leading from the front.
