

include world-class ports, unified vehicle registries and an aviation hub. The blueprint also looks at social equity, advocating a minimum basic income, stronger social security, child protection and fair wages, while its final pillar, digital sovereignty and tech policy, proposes AI-era consumer protection, new cyber laws, crypto regulation and global recognition of India's digital IDs.

We could have drawn up a thousand ideas for a country of this scale and complexity. What we chose to do was to curate a list through in-house brainstorming and enriched by diverse inputs. Manish Sabharwal, co-founder of Team-Lease, Rajesh Shukla of PRICE, as well as reports from the World Bank and think tanks like CSIS and ICRIER helped shape this list. Former bureaucrats R. Gopalan, Anil Swarup, Subhash Chandra Garg and S.N. Tripathi, who is now Director General of the Indian Institute of Public Administration, shared their perspective, while economists D.K. Srivastava of EY India and Rumki Majumdar of

Deloitte vetted the final compilation. Haseeb Drabu, former finance minister of J&K; Gautam Chikermame of the Observer Research Foundation; and Srinath Sridharan, corporate adviser and independent director on corporate boards, added further insight. The result is a collective vision laid out across ten sections.

All of these connect to one big picture: India@100 as a \$30-trillion economy, with a per capita income that firmly places it among the world's developed nations. But urgency underpins this vision.

India has done hard things before. It has built world-class digital infrastructure, tripled per capita GDP, halved extreme poverty and created global champions. Yet contradictions remain, Unicorns coexist with underemployment; cutting-edge technology sits alongside gaps in basic education, health and municipal services.

These 100 ideas are not a prediction, they are a call for action.
