UNLOCK GLOBAL LISTING

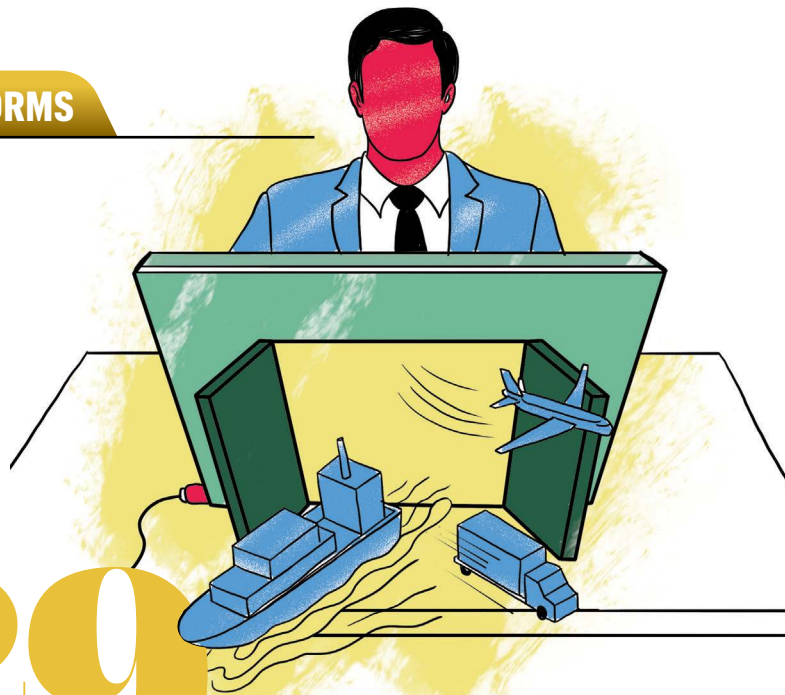

► Back in 2023, India changed Section 23 of the Companies Act so that public companies could list directly on foreign exchanges via GIFT IFSC. This sounds great on paper but not much has happened since. The rules are still unclear and there's no road map for how companies can actually go about it. Many start-ups still turn to exchanges like the NASDAQ and the LSE for better funding, higher valuations and visibility. If the government really wants this to work, it needs to finalise the framework fast.

BUILD A SMART EXPORT SYSTEM

► Indian exporters deal with too many systems. For every shipment, they're juggling Customs forms, DGFT filings, bank paperwork, port clearances, and shipping line instructions—all separately. A single digital window could save a lot of time. Just one portal to handle documents, get approvals, track invoices and send shipping info. MSMEs would benefit the most as they can't afford to hire teams for so much paperwork. This is urgent to meet the goal of \$2 trillion exports by 2030.

PROMOTE A PREDICTABLE POWER TARIFF REGIME

► For India to keep its industrial engine running, it needs stable and predictable power tariffs—whether it's coal, gas, nuclear or renewables. Long-term contracts would give companies some certainty. Reforms in coal supply have helped, but that's just one piece. There's still a lack of clarity on renewable access. Sudden tariff hikes and cross-subsidies only make things harder for manufacturers, data centres and global firms planning long-term.
