

TARGET 6% SPEND ON PRIMARY EDUCATION

► Raise public education spending to 6% of GDP with targeted investment in primary education to close learning gaps, reduce dropouts, and boost enrolment. Focus on foundational literacy and numeracy. Strengthen classroom delivery with measurable targets and retrain teachers. Introduce structured incentives like performance-based pay and peer reviews to enhance teacher accountability. A well-funded primary education system is essential for equitable learning.

BEGIN SKILLING AT SCHOOL

► Introduce vocational education as a core part of school curricula from middle school to prepare industry-ready students. Align these programmes with findings from a national skill gap analysis and tailor them to meet local and regional industry needs. Early exposure to practical trades, digital literacy, and soft skills will reduce unemployability and ensure a smoother school-to-work transition. This will help bridge the gap between theoretical knowledge and real-world requirements, creating a future-ready education system.

HAVE A SINGLE EDUCATION REGULATOR

► Replace the University Grants Commission and All India Council for Technical Education with a unified higher education regulator. A streamlined body with clearly defined mandates can cut down on bureaucratic delays, reduce regulatory overlap, and improve ease of imparting education. Simplified accreditation and compliance processes will help institutions focus on quality, research, and innovation rather than paperwork.
